Organic Farming In India:

India's Organic Farming Revolution Sapna E. Thottathil, 2014-10-01 Should you buy organic food Is it just a status symbol or is it really better for us Is it really better for the environment What about organic produce grown thousands of miles from our kitchens or on massive corporately owned farms Is local or small scale better even if it s not organic A lot of consumers who would like to do the right thing for their health and the environment are asking such questions Sapna Thottathil calls on us to rethink the politics of organic food by focusing on what it means for the people who grow and sell it what it means for their health the health of their environment and also their economic and political well being Taking readers to the state of Kerala in southern India she shows us a place where the so called Green Revolution program of hybrid seeds synthetic fertilizers and rising pesticide use had failed to reduce hunger while it caused a cascade of economic medical and environmental problems Farmers burdened with huge debts from buying the new seeds and chemicals were committing suicide in troubling numbers Farm laborers suffered from pesticide poisoning and rising rates of birth defects A sharp fall in biodiversity worried environmental activists and everyone was anxious about declining yields of key export crops like black pepper and coffee In their debates about how to solve these problems farmers environmentalists and policymakers drew on Kerala s history of and continuing commitment to grassroots democracy In 2010 they took the unprecedented step of enacting a policy that requires all Kerala growers to farm organically by 2020 How this policy came to be and its immediate economic political and physical effects on the state s residents offer lessons for everyone interested in agriculture the environment and what to eat for dinner Kerala s example shows that when done right this kind of agriculture can be good for everyone in our global food system

Organic Farming - Challenges And Prospects In Ne India Sentimenla Jamir, N A
Agricultural Sustainability Through Organic Farming in North East India Popiha Bordoloi & Ayyanadar
Arunachalam, Sustainable agriculture aims for the environment friendly method of farming which produce the society s present food and textile needs without compromising the production ability of human and natural systems for current or future generation s need It works on integration of three main objectives namely a healthy environment economic stability of farms and farmers and social equity for improvement of the livelihood of the society Organic Farming which acts for sustainable agriculture is an eco friendly technique of agricultural production system can be considered as a natural tool for the environmental protection and sustainable development North Eastern India is the integration of natural wonders and combination of different tradition and culture The agriculture in North Eastern India is organic in nature by wisdom The farmers of this region are practicing Organic Farming with indigenou knowledge system from ages It has the natural choice for promoting and intensification of Organic Farming and has tremendous opportunity to promotion of Organic Farming for

profit maximization of the farmers and for environmental sustainability It has huge potential for organic crop production and as a tremendous scope for converting the North Eastern India as an Organic Hub by covering its maximum of the area Despite of long term sustainability and environmental benefits along with lots of prospects in Organic Farming some challenges hinder the development of Organic Farming in this area Moreover the productivity of agricultural commodities is very low in North Eastern India which delays the socio economic development of this region So utilizing the positive effects of Organic Farming in a scientific way the productivity of cop and other agricultural commodities can be increase which may be the boon for Doubling Farmers Income of this disadvantaged region of India regarding crop productivity and soil sustainability Some immediate vital actions are required and simultaneously some activities are also going on by various organizations like new technology explosion for enhance the productivity which will helps for overcoming the challenges faced by the people of North Eastern India for successful implementation of Organic Farming This book attempts to explore and highlights the present status prospects and challenges of Organic Farming in North Eastern India selection of suitable organic approaches for soil health management impact of organic agriculture on environmental sustainability along with some of the tested integrated nutrient management packages of major crops suitable for socio economic development of the Region and also cite the remedies for mitigate the challenges which are very much essential for agricultural sustainability of North Eastern Region of India *Organic Farming* Zaffar Bashir,Rohitashw Kumar,Mehrun Nisa,2025-05-07 As the demand for healthy and sustainable food options increases organic farming is becoming a viable alternative to conventional farming practices that traditionally rely heavily on synthetic inputs *Organic Farming A Comprehensive Guide to Sustainable Agriculture* examines a wide range of topics related to organic farming including soil health organic fertilizers biodiversity biotechnological interventions microbial inoculants and bio stimulants genome editing as well as certification and marketing This book serves as an important and timely resource for those interested in sustainable and organic farming practices including farmers students researchers and policymakers It Offers practical advice and strategies for farmers and policymakers looking to transition to or promote sustainable and organic farming practices Presents the latest biotechnological interventions for organic farming Emphasizes the importance of organic farming for a sustainable future and highlights the challenges and opportunities facing the organic farming industry **Organic Produce Supply Chains in India (CMA Publication No. 222)** Sukhpal Sigh ,2009-06-28 This book examines the production procurement and marketing aspects of the organic produce sector with the focus on marketing agencies and producers in each commudity product chain It analyses the various institutional arrangements like contract farming networking and producer level co ordination prevalent in this sector Based on case studies of various type of organic players in India both in export market as well as in domestic market *Organic Agriculture Towards Sustainability* Natalia S. Kotian,2017-11 Organic agriculture has gained immense popularity in recent years due to the belief that it is safer and better for the environment and human health

because it is inherently free of synthetic chemicals that are often harmful Demand for organic food touched USD 81.6 billion in 2015 according to Organic Monitor with the USA being the largest consumer of organic food products Organic agriculture and consequently organically cultivated animal and plant products are an important and increasingly profitable segment among food products that are sold at a premium higher than prices for conventionally produced food The well-heeled highly educated class of consumers that views itself as socially responsible and politically engaged is the largest consumer of organic food The purchase and consumption of food labelled as Organic is slowly but steadily becoming one of the means of inconspicuous consumption patterns that are helping the wealthy and the nouveau riche to distinguish itself from the rest of the society The term organic agriculture is sometimes synonymously used with sustainable agriculture Many universities across Europe and North America have started graduate level degree programs to teach organic sustainable agricultural development The author herself holds a Master's degree in Sustainable Agriculture Development Food security for development Organic farming and its potential for contributing in a sustainable manner read without causing pollution to food production has greatly won the interest of young college students across the world and this is seen as problematic by critics of organic farming The increasing agricultural cultivation area under organic farming is subject to criticism Critics and sceptics have rightly pointed out that farms managed organically have lower yields than those of conventional farms are input and labour intensive and do not always help the farmer to earn profits Organic food has also been found to be no better than conventionally produced food in terms of nutrients or organoleptic properties The supporters and proponents of organic farming strongly argue in favour of the environmental and health benefits offered by organic farming and organic produce There are studies to support both sides of the argument Many books and manuals are available in the market either free or at a cost to help farmers adopt organic cultivation practices These suggestions are more or less based on the same principles and have many methods in common with conventional agriculture However the inputs are always of a non-synthetic nature The organic agriculture manuals and guidebooks are always tailored to match the agro-climatic and soil conditions of the target reader audience The manuals have systematic instructions and methods w.r.t soil fertility management seed plant material procurement for cultivation weed control pest and disease management organic animal husbandry and storage of harvested produce Farmers across the globe have had a mixed bag of results trying to implement organic agricultural practices recommended for their region This book is an attempt to honestly evaluate the practical implementation of organic farming recommendations and to see their advantages and disadvantages The author as an enthusiastic young rural development worker in India had herself tried to promote organic sugar cane production among smallholder farmers The results were very enlightening The most important lesson learnt was that agricultural research and subsequently extension education efforts are logistically difficult to implement and are in fact far removed from reality The chapter on soil fertility management considers all the possible organic options for enhancing and maintaining soil fertility The suggestions on the

use of bulky and concentrated organic manures have been studied with the point of view of actually implementing these on the farm Green manure crops and leguminous crops have also been studied for their use in improving soil N P and K content along with the potential advantages and disadvantages of actually including them in a crop rotation cycle Organic farms need to supply the correct amount of macro and micronutrients to their crops for optimum growth and input substitution i e the use of a proportionate amount of manures to match N P and K supplied by chemical fertilizers is not the correct method Input substitution can potentially lead to ground and surface water pollution due to leaching just like in the case of excessive synthetic fertilizer use It can cause a serious imbalance of macronutrients in the soil as decomposition of organic manure tends to reduce certain nutrients and makes others available in concentrated amounts in the soil solution The book also discusses the logistical and financial difficulties involved in the procurement of extremely large volumes of organic fertilizers as mandated in many organic agriculture manuals What many individuals including this author before attempting organic farming often fail to take into account is that organic agriculture and conventional industrial agriculture interdependent Organic farms are permitted to use manures and organic wastes that originate from non organically managed facilities So an organic maize farm is permitted to use cow dung from a non organically managed dairy or chicken manure from a non organic poultry farm and hence this makes the maize farm indirectly dependent upon nutrients from synthetic sources Organic agriculture and conventional farming are inextricably intertwined For ensuring that organic agriculture grows in cultivation area gains more consumers and that it is taken seriously it should be accepted that organic and conventional farming must co exist The success of organic agriculture also requires the selection of seeds or planting material suited for organic cultivation practices and the chapter on seeds and planting material discusses the various options available to farmers Most of the commercially available varieties of various crops in the market are either high yielding F1 hybrids or patented GMOs that are best suited to intensive chemical fertilizer usage and heavy irrigation These varieties do not produce viable seeds that can be used in the next cropping season for sowing by the farmer This makes farmers dependent upon corporate companies for seeds every year It is even believed that if all GMO and high yielding varieties were to be taken out of the market then farmers would be left with very few viable seed options for cultivation The use of F1 hybrids leads to the loss of useful characteristics that may be present in indigenous traditional varieties as these are often replaced by hybrid seeds Both traditional and contemporary hybrid varieties have their place in the agricultural production system and both should be considered and used on organic farms as per their characteristics and utility for a farmer This also makes a wide variety of seed choices available for organic farmers Organic agricultural production should not be hindered due to an artificial shortage of seeds despite the availability of commercial hybrid seeds However organic agriculture regulations prohibit the use of GMOs and seeds treated with chemical pesticides Weed control in agriculture both conventional and organic is the most important priority for farmers It is even said that the benefit of effective weed control for crops is

comparable to the addition of fertilizers to the land Organic agriculture does not allow the use of chemical defoliant for weed control on organic farms and this leaves farmers only with mechanical and manual weed control measures This steeply increases the requirement for human labour and machinery use Organic farming is hence a very difficult cultivation system to adapt in countries where agriculture is not heavily mechanized Even in industrialized countries where heavy farm machinery use for almost all agricultural tasks is the norm elimination of herbicide use is a difficult proposition Synthetic herbicides are applied to farms with standing crops to free them of weed growth so as to permit harvesting combines and other harvesting machines to pass unhindered through the crop for harvesting The chapter discusses the various options available for weed control on a farm and the advantages and disadvantages associated with their use Organic farming is highly labour intensive and the availability of labour for carrying out weeding work and the ability to bear the extra cost greatly determines a farm s ability to adapt organic management practices Moreover the health problems caused by manual weeding work for labourer also have the potential to cancel out all benefits accrued through the elimination of synthetic chemical usage on farms As herbicide usage is prohibited on organic farms so is the use of pesticides for the control of pests Consumers turn to organic food because it has negligible or no pesticide residues whereas many farmers opt for organic agriculture because conventional industrial farming ruins natural resources on and near the farm The chapter on Biological control of insects and pests discusses the various non chemical options available for farmers for pest control and how the natural enemies of pests can be deployed against pests under certain circumstances for keeping pest populations below the threshold of economic damage This is far easier said than done because biological control mechanisms are a slow process and take many years to establish themselves Moreover biological control agents such as entomopathogens and beneficial bacteria are often difficult to procure store transport and deploy on a farm They also need to be protected against chemical treatments that may be carried out on neighbouring farms Another risk that exists with the prolonged use of bioagents is the threat that they themselves might become harmful for non target species and might even start feeding upon crop species There have been recorded instances where insects introduced against weeds started feeding on the main crop itself A farmer needs to take into consideration various permutations and combinations before choosing and using various bioagents on his field However the threat from bio agents is not as dangerous as that from the excessive and unregulated use of pesticides Apart from plant origin products the customer today has also grown increasingly conscious of the quality of livestock products and the conditions under which they are manufactured owing to the various scandals involving adulteration of milk meat and eggs with harmful synthetic substances deliberate or otherwise and bacterial contamination due to unhygienic production practices People are also concerned about antibiotic overuse for rearing animals and the subsequent development of antibiotic resistance among pathogenic bacteria rendering many known drugs ineffective for treatment There have been reports from various countries about traces of several pesticides insecticides drugs and hormones being detected in animal

origin products that could prove harmful to human health to the extent of being carcinogenic The stated concerns have prompted an increase in the number of livestock farmers shifting to organic production both for quality concerns and to earn better premium on organic milk meat and eggs The chapter on organic livestock farming discusses various organic livestock and poultry farming management systems and covers issues related to health management record keeping breeding strategies cost of production and input and the various problems encountered in organic breeding of livestock Finally any business works for profit Organic farms are no different For organic farming to be successful the organic products need to be certified and marketed correctly at the optimum price point for the farmer to be able to recover his costs and to earn a decent profit The final consumer must also be assured of actually receiving what he she has paid a higher premium for i e truly organically produced goods The prices for organic food are often very high as compared to conventionally produced food and this is expected to change once the supply of organically produced food increases and balances out the market The market for organic food is growing at a rapid pace but the production of organic food can barely match this rate To ensure sustainable growth of the organic food produce market there is an urgent need to provide farmers with correct and practical advice for all aspects of organic farm management to offer them assistance with record keeping certification appropriate transportation and food processing to avoid contamination of organic food with prohibited chemical substances and marketing of organic produce

Production and Marketing in India Efficiency, Issues and Policies (CMA Publication No. 239) Kumara Charyulu Deevi, Subho Biswas, 2011-07-25 The success of industrial agriculture and the green revolution in recent decades has often masked by significant externalities affecting natural resources and human health as well as agriculture itself Environmental and health problems associated with agriculture have been increasingly well documented but it is only recently that the scale of the costs has attracted the attention of planners and scientists Increasing consciousness about conservation of environment as well as of health hazards caused by agrochemicals has brought a major shift in consumer preference towards food quality This timely book is a one stop resource for agriculturists planners policy makers and other stakeholders who are involved in organic cultivation The findings emanated from this study would be helpful for Ministry of Agriculture organic producers organic input users and other associations involved in organic produce supply chains in the country
