Neurodegeneration** Rudy J. Castellani,2020-04-15 Holbourne s theory that rotational head movement and shear strains
were limiting factors in producing acute parenchymal brain damage was a watershed moment in understanding traumatic
brain injury TBI Long term effects and in particular neurodegenerative proteinopathy subsequent to TBI remain theoretical
notwithstanding the poorly understood punch drunk syndrome of the early and mid 20th century and the 21st century
concept of chronic traumatic encephalopathy This book the Handbook of Traumatic Brain Injury and Neurodegeneration has
as its theme the marriage between neurodegenerative disease and neurotrauma through TBI surrogates such as sport
military service and experimental models and the legitimacy of that marriage In the 32 contributions included here this
handbook not only explores the deleterious effects of genuine TBI but also and more importantly the relationship between
TBI and neurodegeneration Controversy notwithstanding there is much to be learned about the biological effects of TBI
substrates for long term sequelae the relationship between TBI and diverse neuropsychiatric disorders and targets for
therapy The overall message to the neuroscience community from these papers may be a cautionary tale The null hypothesis
that there is no causal relationship between TBI and progressive neurodegenerative disease appears to be very much in play
