Basic Programming Principles 2/E ePDF, 2015 [Basic Programming Principles](#) Correlie M. Pretorius, Hetsie G. Erasmus, 2012 [GeoComputation, Second Edition](#) Robert J. Abraham, Linda M. See, 2014-06-23 A revision of Openshaw and Abraham's seminal work *GeoComputation* Second Edition retains influences of its originators while also providing updated state of the art information on changes in the computational environment. In keeping with the field's development this new edition takes a broader view and provides comprehensive coverage across the field of GeoComputation. See What's New in the Second Edition: Coverage of ubiquitous computing, the GeoWeb, reproducible research, open access, and agent-based modelling; Expanded chapter on Genetic Programming and a separate chapter developed on Evolutionary Algorithms; Ten chapters updated by the same or new authors and eight new chapters added to reflect state of the art. Each chapter is a stand-alone entity that covers a particular topic. You can simply dip in and out or read it from cover to cover. The opening chapter by Stan Openshaw has been preserved with only a limited number of minor essential modifications having been enacted. This is not just a matter of respect: Openshaw's work is eloquent, prophetic, and his overall message remains largely unchanged. In contrast to other books on this subject, *GeoComputation* Second Edition supplies a state of the art review of all major areas in GeoComputation with chapters written especially for this book by invited specialists. This approach helps develop and expand a computational culture, one that can exploit the ever-increasing richness of modern geographical and geospatial datasets. It also supplies an instructional guide to be kept within easy reach for regular access and when need arises.

[Automotive Accident Reconstruction](#) Donald E. Struble, John D. Struble, 2020-01-24 This fully updated edition presents practices and principles applicable for the reconstruction of automobile and commercial truck crashes. Like the First Edition, it starts at the very beginning with fundamental principles, information sources, and data gathering and inspection techniques for accident scenes and vehicles. It goes on to show how to analyze photographs and crash test data. The book presents tire fundamentals and shows how to use them in spreadsheet-based reverse trajectory analysis. Such methods are also applied to reconstructing rollover crashes. Impacts with narrow fixed objects are discussed. Impact mechanics, structural dynamics, and conservation-based reconstruction methods are presented. The book contains a comprehensive treatment of crush energy and how to develop structural stiffness properties from crash test data. Computer simulations are reviewed and discussed. Extensively revised, this edition contains new material on side pole impacts. It has entirely new chapters devoted to low speed impacts, downloading electronic data from vehicles, deriving structural stiffness in side impacts, and incorporating electronic data into accident reconstructions.
