Engineering Optimization Lecture Notes:

Lecture Notes in Real-Time Intelligent Systems Jolanta Mizera-Pietraszko, Pit Pichappan, 2017-08-07 Intelligent computing refers greatly to artificial intelligence with the aim at making computer to act as a human This newly developed area of real time intelligent computing integrates the aspect of dynamic environments with the human intelligence This book presents a comprehensive practical and easy to read account which describes current state of the art in designing and implementing real time intelligent computing to robotics alert systems IoT remote access control multi agent systems networking mobile smart systems crowd sourcing broadband systems cloud computing streaming data and many other applications areas The solutions discussed in this book will encourage the researchers and IT professional to put the methods into their practice

Nature-Inspired Optimization Algorithms Xin-She Yang, 2020-09-09 Nature Inspired Optimization Algorithms Second Edition provides an introduction to all major nature inspired algorithms for optimization The book s unified approach balancing algorithm introduction theoretical background and practical implementation complements extensive literature with case studies to illustrate how these algorithms work Topics include particle swarm optimization ant and bee algorithms simulated annealing cuckoo search firefly algorithm bat algorithm flower algorithm harmony search algorithm analysis constraint handling hybrid methods parameter tuning and control and multi objective optimization This book can serve as an introductory book for graduates for lecturers in computer science engineering and natural sciences and as a source of inspiration for new applications Discusses and summarizes the latest developments in nature inspired algorithms with comprehensive timely literature Provides a theoretical understanding and practical implementation hints Presents a step by step introduction to each algorithm Includes four new chapters covering mathematical foundations techniques for solving discrete and combination optimization problems data mining techniques and their links to optimization algorithms and the latest deep learning techniques background and various applications

Analysis and Comparison of Metaheuristic Erik Cuevas, Omar Avalos, Jorge Gálvez, 2022-11-02 This book presents a comparative perspective of current metaheuristic developments which have proved to be effective in their application to several complex problems The study of biological and social entities such as animals humans or insects that manifest a cooperative behavior has produced several computational models in metaheuristic methods Although these schemes emulate very different processes or systems the rules used to model individual behavior are very similar Under such conditions it is not clear to identify which are the advantages or disadvantages of each metaheuristic technique The book is compiled from a teaching perspective For this reason the book is primarily intended for undergraduate and postgraduate students of Science Electrical Engineering or Computational Mathematics It is appropriate for courses such as Artificial Intelligence Electrical Engineering Evolutionary Computation The book is also useful for researchers from the evolutionary and engineering communities Likewise engineer practitioners who are not familiar with metaheuristic computation concepts will appreciate that the techniques discussed are

beyond simple theoretical tools since they have been adapted to solve significant problems that commonly arise in engineering areas

Predictive Analytics in System Reliability Vijay Kumar, Hoang Pham, 2022-09-08 This book provides engineers and researchers knowledge to help them in system reliability analysis using machine learning artificial intelligence big data genetic algorithm information theory multi criteria decision making and other techniques It will also be useful to students learning reliability engineering The book brings readers up to date with how system reliability relates to the latest techniques of AI big data genetic algorithm information theory and multi criteria decision making and points toward future developments in the subject

Real-life Applications with Membrane Computing Gexiang Zhang, Mario J.

Pérez-Jiménez, Marian Gheorghe, 2017-04-05 This book thoroughly investigates the underlying theoretical basis of membrane computing models and reveals their latest applications In addition to date there have been no illustrative case studies or complex real life applications that capitalize on the full potential of the sophisticated membrane systems computational apparatus gaps that this book remedies By studying various complex applications including engineering optimization power systems fault diagnosis mobile robot controller design and complex biological systems involving data modeling and process interactions the book also extends the capabilities of membrane systems models with features such as formal verification techniques evolutionary approaches and fuzzy reasoning methods As such the book offers a comprehensive and up to date guide for all researchers PhDs and undergraduate students in the fields of computer science engineering and the bio sciences who are interested in the applications of natural computing models

Sustainable Production through

Advanced Manufacturing, Intelligent Automation and Work Integrated Learning Joel Andersson, Shrikant Joshi, Lennart Malmsköld, 2024-05-15 Collaboration between those working in product development and production is essential for successful product realization The Swedish Production Academy SPA was founded in 2006 with the aim of driving and developing production research and higher education in Sweden and increasing national cooperation in research and education within the area of production This book presents the proceedings of SPS2024 the 11th Swedish Production Symposium held from 23 to 26 April 2024 in Trollhättan Sweden The conference provided a platform for SPA members as well as for professionals from industry and academia interested in production research and education from around the world to share insights and ideas The title and overarching theme of SPS2024 was Sustainable Production through Advanced Manufacturing Intelligent Automation and Work Integrated Learning and the conference emphasized stakeholder value the societal role of industry worker wellbeing and environmental sustainability in alignment with the European Commission's vision for the future of manufacturing The 59 papers included here were accepted for publication and presentation at the symposium after a thorough review process They are divided into 6 sections reflecting the thematic areas of the conference which were sustainable manufacturing smart production and automation digitalization for efficient product realization circular production industrial transformation for sustainability and the integration of education and research Highlighting
