A Course in Linear Algebra David B. Damiano, John B. Little, 1988

The Theory and Practice of Conformal Geometry Steven G. Krantz, 2016-02-17 An expert on conformal geometry introduces some of the subject's modern developments Topics include the Riemann mapping theorem invariant metrics automorphism groups harmonic measure extremal length analytic capacity invariant geometry and more 2016 edition

An Introduction to Complex Systems Paul Fieguth, 2021-09-03 Complex Systems lie at the heart of a variety of large scale phenomena of great significance global warming ice ages water poverty pandemics and this text uses these case studies as motivations and contexts to explore complex systems and related topics of nonlinear dynamics and power law statistics Although detailed mathematical descriptions of these topics can be challenging the consequences of a system being nonlinear power law or complex are in fact quite accessible This book blends a tutorial approach to the mathematical aspects of complex systems together with a complementary narrative on the global ecological societal implications of such systems Nearly all engineering undergraduate courses focus on mathematics and systems which are small scale linear and Gaussian Unfortunately there is not a single large scale ecological or social phenomenon that is scalar linear and Gaussian This book offers insights to better understand the large scale problems facing the world and to realize that these cannot be solved by a single narrow academic field or perspective Instead the book seeks to emphasize understanding concepts and ideas in a way that is mathematically rigorous so that the concepts do not feel vague but not so technical that the mathematics get in the way The book is intended for students in technical domains such as engineering computer science physics mathematics and environmental studies This second edition adds nine new examples over 30 additional problems 50 additional figures and three new chapters offering a detailed study of system decoupling extensive solutions to chapter problems and a timely discussion on the complex systems challenges associated with COVID 19 and pandemics in general

Modern Methods in Topological Vector Spaces Albert Wilansky, 2013-11-26 Geared toward beginning graduate students of mathematics this text covers Banach space open mapping and closed graph theorems local convexity duality equicontinuity operators inductive limits and compactness and barrelled spaces 1978 edition

An Introduction to Pattern Recognition and Machine Learning Paul Fieguth, 2022-11-09 The domains of Pattern Recognition and Machine Learning have experienced exceptional interest and growth however the overwhelming number of methods and applications can make the fields seem bewildering This text offers an accessible and conceptually rich introduction a solid mathematical development emphasizing simplicity and intuition Students beginning to explore pattern recognition do not

need a suite of mathematically advanced methods or complicated computational libraries to understand and appreciate pattern recognition rather the fundamental concepts and insights eminently teachable at the undergraduate level motivate this text This book provides methods of analysis that the reader can realistically undertake on their own supported by real world examples case studies and worked numerical computational studies Optimization in Function Spaces Amol Sasane,2016-04-10 This highly readable volume on optimization in function spaces is based on author Amol Sasane s lecture notes which he developed over several years while teaching a course for third year undergraduates at the London School of Economics The classroom tested text is written in an informal but precise style that emphasizes clarity and detail taking students step by step through each subject Numerous examples throughout the text clarify methods and a substantial number of exercises provide reinforcement Detailed solutions to all of the exercises make this book ideal for self study The topics are relevant to students in engineering and economics as well as mathematics majors Prerequisites include multivariable calculus and basic linear algebra The necessary background in differential equations and elementary functional analysis is developed within the text offering students a self contained treatment *A Course in Linear Algebra* David B.
