**New Directions in Mathematics Education** G. Brian Greer,Gerry Mulhern,1989 The Chicago Renaissance has long been considered a less important literary movement for American modernism than the Harlem Renaissance The Chicago Renaissance had its origin around the turn of the nineteenth century from 1890 to 1910 gathered momentum in the 30s and paved the way for the postmodern and postcolonial development in American literature even since Yoshinobu Hakutani aims to shed light on this seldom studied yet pivotal period by studying some of it s most influential works and authors from Theodore Dreiser in the late 1800 s to Richard Wright through the mid 1900 s      Teaching Mathematics Michelle Selinger,1994 In this reader maths teachers in the early years of their careers will find a concise yet comprehensive guide to developments in mathematics teaching in secondary schools and the controversies which currently surround it After a brief summary of the historical context a series of short articles provides a range of perspectives on various issues of current debate which will help new teachers in the development of their own teaching styles These include the impact of computers and calculators in maths teaching the various arguments about the use of published schemes and for more investigational approaches to the curriculum and the way in which social and cultural factors can be approached through the teaching of various topics in mathematics The final section looks at how teachers might continue their professional development through action research in their own classrooms      Research for Educational Change Jill Adler,Anna Sfard,2016-06-17 Research for Educational Change presents ways in which educational research can fulfil its commitments to educational practice Focussing its discussion within the context of mathematics education it argues that while research generated insights can have beneficial effects on learning and teaching the question of how these effects are to be generated and sustained is far from evident The question of how to turn research into educational improvement is discussed here in the context of learning and teaching hindered by poverty and social injustice In the first part of the book four teams of researchers use different methodologies while analysing the same corpus of data collected in a South African mathematics classroom In the second

part each of these teams makes a specific proposal about what can be done and how so that its research generated insights have a tangible beneficial impact on what is happening in mathematical classrooms Combining two discourses that of researchers speaking to one another and that of researchers communicating their insights to those responsible for educational practice the book deals with the perennial question of communication between those who study educational processes and those who are directly responsible for teacher education educational research and classroom practices This book will be key reading for postgraduates researchers and academics in education and particularly in the areas of mathematics education education research teacher education and classroom practice It will also appeal to teacher educators practitioners and undergraduate students interested in educational research Commonwealth Universities Yearbook T. Kitchenham, Kea Tijdens, 1991 This volume considers the impact of information technology on women's employment and education by examining two main themes the effect of women's perspectives on systems analysis and design and the factors which lead to the under representation of women in the computer profession and in particular to the low numbers of female students of computer science and informatics Statistics on participation of women in the computer industry are included along with theories and empirical findings on participatory design of office systems and case studies on the impact of information technology on gendered division of labour Papers suggesting ways of overcoming the problems faced both by women users of computer systems and by women entering the computing profession complete the volume Mathematics Today , 2007 *The Mathematical Gazette* , 1986
