comprehensive source of cutting edge information and research in the important field of optomechanical engineering Some of the current research trends that are covered include *Engineering Drawing for Manufacture* Brian Griffiths,2002-10-01 The processes of manufacture and assembly are based on the communication of engineering information via drawing These drawings follow rules laid down in national and international standards The organisation responsible for the international rules is the International Standards Organisation ISO There are hundreds of ISO standards on engineering drawing because drawing is very complicated and accurate transfer of information must be guaranteed The information contained in an engineering drawing is a legal specification which contractor and sub contractor agree to in a binding contract The ISO standards are designed to be independent of any one language and thus much symbology is used to overcome any reliance on any language Companies can only operate efficiently if they can guarantee the correct transmission of engineering design information for manufacturing and assembly This book is a short introduction to the subject of engineering drawing for manufacture It should be noted that standards are updated on a 5 year rolling programme and therefore students of engineering drawing need to be aware of the latest standards This book is unique in that it introduces the subject of engineering drawing in the context of standards **The Mechanical Engineering Drawing Desk Reference** Paul Green,2007-06 Focusing on the technical drawing aspect of mechanical engineering design the book shows exactly how to create technical drawings to a professional standard with As drawn examples throughout which clearly show the layout and dimensions needed for your drawing these are accompanied by notes which clearly explain the dimensioned features Back cover *Fundamentals of Technical Graphics, Volume I* Edward E.
