**Measurement of Technical Efficiency in Stochastic Frontier Analysis with Limited and Qualitative Dependent Variables** Shih-Tang Hwu, 2017 As vividly demonstrated in Maddala 1983 limited and qualitative dependent variables are often encountered in modern econometric analysis However analytical methods for evaluating technical efficiency of stochastic frontier analysis can only be applied to continuous dependent variable This paper provides closed form formulae for evaluating the technical efficiency of stochastic frontier analysis with limited and qualitative dependent variables Monte Carlo experiments reveal that the finite sample performances of our formulae are promising **Stochastic Frontier Analysis** Subal C. Kumbhakar, C. A. Knox Lovell, 2003-03-10 This book develops econometric techniques for the estimation of production cost and profit frontiers and for the estimation of the technical and economic efficiency with which producers approach these frontiers Since these frontiers envelop rather than intersect the data and since the authors continue to maintain the traditional econometric belief in the presence of external forces contributing to random statistical noise the work is titled Stochastic Frontier Analysis Hb ISBN 2000 0 521 48184 8 Technical Efficiency and Its Determinants, 2018 This paper disaggregates and explores the components of efficiency that contribute to the change in output scale of production and technical efficiency of sugar mills in Uttar Pradesh The efficiency concept defines the maximum level of output that can be obtained by using the same level of inputs in the production of a firm or industry The investigation of inefficiency effect is obviously useful for the growth and development of sugar mills To measure the efficiency level and its determinants of sugar mills operating in Uttar Pradesh by applying Stochastic Frontier Approach SFA data of 115 sugar mills for the year 2011 12 was collected It is found that the public limited company is most efficient while the public corporations are least efficient However the next best performing mills belong to individual proprietors In terms of ownership the state and central government jointly owned and wholly owned private sugar mills are found to be more efficient than others Further the sugar mills years of operation has positive relationship with efficiency but does not contribute significantly High efficiency is associated with privately owned sugar mills There is no difference between efficiency levels location wise It has been found that sugar mills are working at constant returns to scale and the efficiency level can be changed by changing the scale The technical changes would help the decision makers to realize the strengths and weaknesses that contribute to the growth and development of sugar mills Essays on Estimating Efficiency and Productivity Using Stochastic Frontier Analysis Paul D. Melvin, 2008 The purpose of this dissertation is to apply stochastic frontier analysis methodology to the study of efficiency and productivity in industry and in education It is comprised of three separate studies employing stochastic frontier analysis First stochastic frontier analysis is used to study technical efficiency in Indian industry and its impact on India's recent economic growth The Indian economy has sustained a consistently high rate of growth since initiating economic reforms in the early 1990s This encouraging growth episode has the rest of the world watching their economic

progress closely This study examines the role of industrial productivity and efficiency in the post reform Indian economy by using the stochastic frontier production function model over the period 1998 through 2004 We find that industry in India has moved closer to the production frontier and the gap between the states with the highest and lowest technical efficiency in industry has narrowed across time Most of the growth in industrial output is attributed to total factor productivity As Indian industry approaches the production frontier growth will necessarily require further technological innovation and or increasing input resources In the second study efficiency of public education in Illinois is estimated Public education in the United States has received a great deal of attention from both constituents and policy makers alike over the past thirty years Identifying less efficient school districts and examining the sources of inefficiency has important policy implications School districts might improve efficiency by managing educational resources differently In this study we estimate technical efficiency for all three types of school districts in the state of Illinois K 12 public education system Technical efficiency in the Illinois school system averaged 90% for unit school districts 85% for elementary school districts and 82% for high school districts Possible factors associated with inefficiency in Illinois school districts are also investigated The percentage of student enrollment that qualifies as low income and the size of the school district are positively related to inefficiency School districts that have a larger percentage of teachers with advanced degrees are more efficient Having a lower ratio of students per administrator in a school district increases technical efficiency The final study analyzes efficiency among schools within a particular school district Efficiency of public high schools in the City of Chicago School District is estimated Technical efficiency of Chicago public high schools averaged 72% We also investigate possible factors associated with inefficiency The percentage of student enrollment that is chronically truant mobility rate and percentage of nonwhite students are all positively related to inefficiency Schools with higher parental involvement are more efficient Larger high schools display greater technical efficiency than smaller high schools

**Towards Sustainable Development Goal of Zero Hunger: Exploring the Dynamic Relationships between Food Pricing, Agriculture, and Food Security** Noshaba Aziz,Wioletta Żukiewicz-Sobczak ,Ruishi Si,2025-10-16 United Nations Sustainable Development Goal SDG 2 aspires to eradicate hunger by 2030 emphasizing the intricate relationships between agriculture food security and nutrition However this noble pursuit faces formidable challenges in emerging countries due to a confluence of international disruptions Climate change the COVID 19 pandemic and geopolitical conflicts like the war in Ukraine have triggered sharp spikes in commodity prices amplifying food security concerns particularly in developing nations The Food and Agriculture Organization of the United Nations recently reported the highest global food price increase since the 1990s in March This commodity price inflation in turn reverberates across agriculture impacting not only a nation s economy but also its food production capacity Elevated commodity prices drive up the costs of agricultural inputs such as fertilizers pesticides and fuel compelling farmers to pass these expenses on to consumers in the form of higher food prices Moreover country specific economic factors within the agricultural sector including land ownership technology adoption farming practices and infrastructure further complicate the food security landscape Therefore the intricate interplay between commodity price inflation agriculture and food security is significantly influenced by a nation s unique economic dynamics within its agricultural sector Effectively addressing these challenges necessitates a blend of international and domestic policy measures to ensure that the benefits of agricultural progress reach the broader population
