What are the key features of JavaScript? Some key features of JavaScript include Dynamic typing, Variables can hold values of any data type without explicit declaration, Prototype based inheritance, Objects can inherit properties and methods from other objects, First class functions, Functions are treated as first class citizens allowing them to be passed around as arguments and returned from other functions, Event driven programming, JavaScript is well suited for handling events such as user interactions and asynchronous operations, Support for object oriented functional and procedural programming paradigms.

What is closure in JavaScript? A closure is a function that retains access to variables from its parent scope even after the parent function has finished executing. Closures are created whenever a function is defined within another function and has access to variables from the outer function's scope.

Explain the concept of hoisting in JavaScript. Hoisting is a JavaScript behaviour where variable and function declarations are moved to the top of their containing scope during the compilation phase. This means that variables and functions can be used before they are declared. However, only the declarations are hoisted, not the initializations.

What are arrow functions in JavaScript? Arrow functions are a concise way to write anonymous functions in JavaScript. They provide a more compact syntax compared to traditional function expressions and lexically bind `this` value.
