Properties of Matter

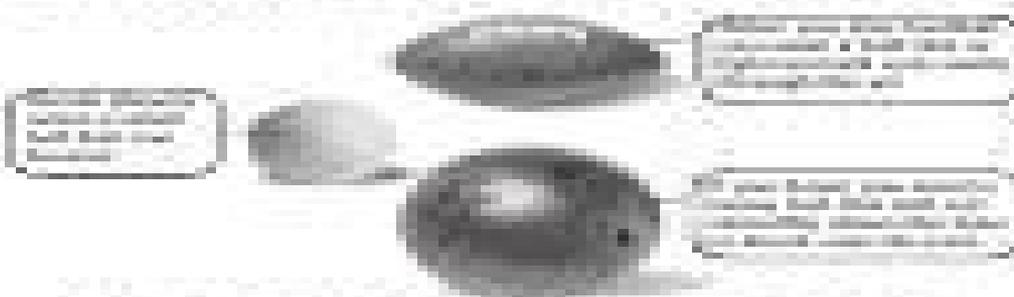

Introduction

Are you able to distinguish between two substances by touch?

- Why are cooking, clothes, and furniture grouped together?
- Why are diamonds, rubies and sapphires grouped together?

What Are Physical Properties?

Start with the bottle on the right below as shown in a well-lit room. Describe the colour of the contents carefully.

A physical property is a characteristic that can be observed without changing the identity of the substance. However, the properties of an object can change as it reacts. For example, you can identify an object's colour, shape, size, or weight. However, the properties of an object are determined by the properties of the particles that it is made up of.

Many of the physical properties of materials that make up objects can be measured. These properties include density, hardness, magnetism, and the ability to conduct heat and electricity.

Some physical properties depend on how much of a material you have. In other words, a large amount of a material may have different properties than a smaller amount of the material. Other physical properties do not depend on how much of the material you have. They show that no matter how large or small a sample of material is, the particular property is always the same.

Learning Objectives
