

**Problem 1:**

For the fluid power automobile lift system of the below figure, the hydraulic piston has a 250-mm diameter. How much of oil pressure (kPa) is required to lift a 13300 N automobile?

Solution 1:

$$P = \frac{F}{A}$$
$$P = \frac{F}{A} = \frac{13300}{\frac{\pi}{4} 0.25^2} = 270.879 \text{ kPa}$$

**Problem 2:**

For the fluid power automobile lift system of the below figure, the air pressure equals 550 kPa gauge. If the hydraulic piston has a diameter of 250 mm, what is the maximum weight of the automobile to be lifted? The specific gravity of oil is 0.9. What percentage error in the answer to this problem occurs by ignoring the 1-m head of oil to between the air and interface surface and bottom surface of the piston? Density of oil is  $900 \frac{\text{kg}}{\text{m}^3}$ .

**Successful Trouble Shooting for Process Engineers** Donald R. Woods, 2006-05-12 Chemical production processes consist of many complex apparatuses involving both moving and static parts as well as interconnecting pipes control mechanisms and electronics mechanical and thermal stages heat exchangers waste and side product processing units power ducts and many others Bringing such a complicated unit online and ensuring its continued productivity requires substantial skill at anticipating detecting and solving acute problems This book is the professional s and student s entrance to the fascinating and important world of trouble shooting for chemical pharmaceutical and other production processes

**Principles of Polymer Processing** Zehev Tadmor, Costas G. Gogos, 2013-12-02 Thoroughly revised edition of the classic text on polymer processing The Second Edition brings the classic text on polymer processing thoroughly up to date with the latest fundamental developments in polymer processing while retaining the critically acclaimed approach of the First Edition Readers are provided with the complete panorama of polymer processing starting with fundamental concepts through the latest current industry practices and future directions All the chapters have been revised and updated and four new chapters have been added to introduce the latest developments Readers familiar with the First Edition will discover a host of new material including Blend and alloy microstructuring Twin screw based melting and chaotic mixing mechanisms Reactive processing Devolatilization theory mechanisms and industrial practice Compounding theory and industrial practice The increasingly important role of computational fluid mechanics A systematic approach to machine configuration design The Second Edition expands on the unique approach that distinguishes it from comparative texts Rather than focus on specific processing methods the authors assert that polymers have a similar experience in any processing machine and that these experiences can be described by a set of elementary processing steps that prepare the polymer for any of the shaping methods On the other hand the authors do emphasize the unique features of particular polymer processing methods and machines including the particular elementary step and shaping mechanisms and geometrical solutions Replete with problem sets and a solutions manual for instructors this textbook is recommended for undergraduate and graduate students in chemical engineering and polymer and materials engineering and science It will also prove invaluable for industry professionals as a fundamental polymer processing analysis and synthesis reference

**The Teaching of Elementary Problem Solving in Engineering and Related Fields** James L. Lubkin, 1980      **Teaching Psychology** Jillian Grose-Fifer, Patricia J. Brooks, Maureen O'Connor, 2019-02-12 A guide to an evidence based approach for teaching college level psychology courses Teaching Psychology offers an evidence based student centered approach that is filled with suggestions ideas and practices for teaching college level courses in ways that contribute to student success The authors draw on current scientific studies of learning memory and development with specific emphasis on classroom studies The authors offer practical advice for applying scholarly research to teaching in ways that maximize student learning and

personal growth The authors endorse the use of backward course design emphasizing the importance of identifying learning goals encompassing skills and knowledge and how to assess them before developing the appropriate curriculum for achieving these goals Recognizing the diversity of today s student population this book offers guidance for culturally responsive ethical teaching The text explores techniques for teaching critical thinking qualitative and quantitative reasoning written and oral communication information and technology literacy and collaboration and teamwork The authors explain how to envision the learning objectives teachers want their students to achieve and advise how to select assessments to evaluate if the learning objectives are being met This important resource Offers an evidence based approach designed to help graduate students and new instructors embrace a student centered approach to teaching Contains a wealth of examples of effective student centered teaching techniques Surveys current findings from the Scholarship of Teaching and Learning Draws on the American Psychological Association s five broad goals for the undergraduate Psychology major and shows how to help students build life long skills and Introduces Universal Design for Learning as a framework to support diverse learners Teaching Psychology offers an essential guide to evidence based teaching and provides practical advice for becoming an effective teacher This book is designed to help graduate students new instructors and those wanting to update their teaching methods It is likely to be particularly useful for instructors in psychology and other social science disciplines [Introduction to Thermal and Fluids Engineering](#) Deborah A.
