A Robotic Framework for the Mobile Manipulator Nguyen Van Toan, Phan Bui Khoi, 2023-03-07 By proposing and forming a mobile manipulator for modern multi floor buildings A Robotic Framework for the Mobile Manipulator Theory and Application helps readers visualize an end to end workflow for making a robot system work in a targeted environment From a product oriented viewpoint this book is considered as a bridge from theories to real products in which robotic software modules and the robotic system integration are mainly concerned In the end readers will have an overview of how

to build and integrate various single robotic modules to execute a list of designed tasks in the real world as well as how to make a robot system work independently without human interventions With references and execution guidelines provided at the end of each chapter the book will be a useful tool for developers and researchers looking to expand their knowledge about the robotics and the robotic software Handbook of Research on Using Educational Robotics to Facilitate Student Learning Papadakis, Stamatios, Kalogiannakis, Michail, 2020-12-05 Over the last few years increasing attention has been focused on the development of children s acquisition of 21st century skills and digital competences Consequently many education scholars have argued that teaching technology to young children is vital in keeping up with 21st century employment patterns Technologies such as those that involve robotics or coding apps come at a time when the demand for computing jobs around the globe is at an all time high while its supply is at an all time low There is no doubt that coding with robotics is a wonderful tool for learners of all ages as it provides a catalyst to introduce them to computational thinking algorithmic thinking and project management Additionally recent studies argue that the use of a developmentally appropriate robotics curriculum can help to change negative stereotypes and ideas children may initially have about technology and engineering The Handbook of Research on Using Educational Robotics to Facilitate Student Learning is an edited book that advocates for a new approach to computational thinking and computing education with the use of educational robotics and coding apps The book argues that while learning about computing young people should also have opportunities to create with computing which have a direct impact on their lives and their communities It develops two key dimensions for understanding and developing educational experiences that support students in engaging in computational action 1 computational identity which shows the importance of young people s development of scientific identity for future STEM growth and 2 digital empowerment to instill the belief that they can put their computational identity into action in authentic and meaningful ways Covering subthemes including student competency and assessment programming education and teacher and mentor development this book is ideal for teachers instructional designers educational technology developers school administrators academicians researchers and students **Futuristic Sustainable Energy & Technology** Rajesh Singh, Anita Gehlot, P.S. Ranjit, Dolly Sharma, 2022-06-07 Futuristic Sustainable Energy and Technology provides a structured overview of the concept of Futuristic Sustainable Energy and Technology It also explores the promotion of the sustainable development of renewable energy from the perspectives of technology modelling application sustainability and policy This book is dedicated to the advancement of energy efficiency to mitigate consumption ensure and replenish expand and reuse elective energy supplies and to replicate the damage caused by previous energy initiatives This book has offered a large stage of experimentation for practitioners experts researchers and teachers to incorporate and analyze their latest developments as well as the trends and difficulties encountered and the ongoing evolution of the stage in these areas *Informatics in Control, Automation and Robotics* Oleg Gusikhin, Kurosh Madani, 2019-04-18 The book focuses the latest endeavours relating researches and

developments conducted in fields of Control Robotics and Automation Through more than twenty revised and extended articles the present book aims to provide the most up to date state of art of the aforementioned fields allowing researcher PhD students and engineers not only updating their knowledge but also benefiting from the source of inspiration that represents the set of selected articles of the book The deliberate intention of editors to cover as well theoretical facets of those fields as their practical accomplishments and implementations offers the benefit of gathering in a same volume a factual and well balanced prospect of nowadays research in those topics A special attention toward Intelligent Robots and Control may characterize another benefit of this book
