Chapter 2 described the research design and methodology. This chapter discusses the research findings with reference to the literature reviewed.

The first two groups consisted of four participants each and the other group consisted of six participants.

The interviews were conducted until saturation of data was reached. According to Polit et al (2001:470), data saturation is "the process of collecting data in a grounded theory study to the point where a sense of closure is achieved because new data yield redundant information". In this study data saturation was reached when the participants
