Gender Differences in Technology and Innovation Management Alexander Brem,Peter M. Bican,Christine Wimschneider,2020-04-20 Even though the number of working women has steadily increased over the last few years women are still significantly under represented in STEM activities i e mathematics informatics science and technology In order to eliminate this under representation numerous education policies and corporate initiatives particularly in the recent past have been aimed at increasing women s enthusiasm for STEM activities and professions According to the latest surveys however it is clear that these efforts have not yet led to the desired success Compared to their male counterparts women continue to do fewer STEM activities One possible reason for this is that relatively little is yet known about the concrete impact of the above education policies on working with innovation and technology What are the gender differences between women and men Is it enough to recognize these differences or should these differences ideally not only be recognized but also treated appropriately or even encouraged This anthology deals with current topics in technology and innovation management against the background of these and other gender relevant aspects Empirical analyses and experiments in collaboration with companies from various sectors provide a sound scientific basis on which new results and findings are presented How do women and men deal with creativity and competition How are technologies applied and how can differences in access to technology be deduced Answers to these and other questions help decision makers in politics and business to proactively use the differences between women and men to motivate women to work in the STEM field and to strengthen them by acknowledging existing differences
