[Introduction to Python Programming for Business and Social Science Applications](#) Frederick Kaefer, Paul Kaefer, 2020-08-06. Would you like to gather big datasets, analyze them, and visualize the results all in one program? If this describes you, then **Introduction to Python Programming for Business and Social Science Applications** is the book for you. Authors Frederick Kaefer and Paul Kaefer walk you through each step of the Python package installation and analysis process with frequent exercises throughout so you can immediately try out the functions you've learned. Written in straightforward language for those with no programming background, this book will teach you how to use Python for your research and data analysis. Instead of teaching you the principles and practices of programming as a whole, this application oriented text focuses on only what you need to know to research and answer social science questions. The text features two types of examples: one set from the General Social Survey and one set from a large taxi trip dataset from a major metropolitan area to help readers understand the possibilities of working with Python. Chapters on installing and working within a programming environment, basic skills, and necessary commands will get you up and running quickly, while chapters on programming logic, data input and output, and data frames help you establish the basic framework for conducting analyses. Further chapters on web scraping, statistical analysis, machine learning, and data visualization help you apply your skills to your research. More advanced information on developing graphical user interfaces (GUIs) help you create functional data products using Python to inform general users of data who don't work within Python. First there was IBM SPSS, then there was R, and now there's Python. Statistical software is getting more aggressive, let authors Frederick Kaefer and Paul Kaefer help you tame it with **Introduction to Python Programming for Business and Social Science Applications**.
