**Critical Visualization** Peter A. Hall, Patricio Dávila, 2022-12-01 Information may be beautiful but our decisions about the data we choose to represent and how we represent it are never neutral This insightful history traces how data visualization accompanied modern technologies of war colonialism and the management of social issues of poverty health and crime The discussion is based around examples of visualization from the ancient Andean information technology of the quipu to contemporary projects that show the fate of our rubbish and take a participatory approach to visualizing cities This analysis

places visualization in its theoretical and cultural contexts and provides a critical framework for understanding the history of information design with new directions for contemporary practice *Data Visualization in Society* Martin

Computer Science IT Security grade 1 St P lten University of Applied Sciences Informatik Security language English abstract  
Process mining is the binding link between computational intelligence data mining process modeling and analysis The thesis  
shows how this research discipline can be applied to network protocols and what the awards will be Process mining is based  
on event data logged by almost every information system This event data is extracted transformed and loaded into the  
process mining tool to discover check conformance or enhance the underlying process based on observed behavior  
Determining the significance of process mining in the field of network protocols and their control flow finding the best  
possible algorithms and notation systems clarifying the prerequisites and providing a proof of concept are the main  
achievements Additionally other reasonable and beneficial applications like mining an alternative protocol dealing with a  
large amount of event data and estimations due to size of necessary event data are investigated **The American Journal
