The scope of this project included development of a means to quantify the service lives of materials used for construction of noise barriers in Illinois development of a life cycle cost model for the evaluation of alternative materials and evaluation of the need for potential changes to the Special Provisions for noise barrier construction currently used in Illinois The project included a survey of all state departments of transportation DOTs to develop information on experiences with noise barrier materials and products which showed that nationwide less than 1% of noise barriers by length have been repaired or replaced and that few DOTs use life cycle cost analysis for selection of noise barriers A comprehensive list of the materials currently approved for use in Illinois by the Illinois Highway Development Council was developed The current condition of existing Illinois noise barriers was assessed by field observation and Illinois Department of Transportation IDOT maintenance personnel were surveyed to develop information on maintenance histories costs of repairs scheduled repair or replacement of barriers and estimated service lives of barriers in place Service life criteria were developed considering the structural acoustical and aesthetic functions of noise barriers A life cycle cost model was developed and the relative life cycle

costs of existing Illinois noise barriers were computed Noise barrier specifications supplied by IDOT and the Illinois State Toll Highway Authority were reviewed and recommendations for improving the organization and content of the specifications were made
