Theory of Automata

Automata
The term "Automata" is derived from the Greek word "αὐτόματα" which means "self-acting".

An automaton with a finite number of states is called a **Finite Automaton** (FA) or **Finite State Machine** (FSM).

Introduction to languages
There are two types of languages

- Formal Languages (Syntactic languages)
- Informal Languages (Semantic languages)

Alphabets
A finite non-empty set of symbols (called letters), is called an alphabet. It is denoted by Σ (Greek letter sigma).

Note

Empty string or null string Sometimes a string with no symbol at all is used, denoted by (Small Greek Letter Lambda) λ or (Capital Greek letter Lambda) Λ, is called an empty string or null string.

Strings
Concatenation of finite number of letters from the alphabet is called a string.

Example
If $\Sigma = \{a,b\}$ then
a, abab, aaabb, ababababababababab

Words
Words are strings belonging to some language.
Example
If $\Sigma = \{x\}$ then a language L can be defined as
$L = \{xn : n=1,2,3,.....\}$ or $L = \{x,xx,xxx,....\}$
Here x,xx,... are the words of L

> All words are strings, but all strings are not words.

While defining an alphabet of letters consisting of more than one symbols, no letter should be started with the letter of the same alphabet i.e. one letter should not be the prefix of another. However, a letter may be ended in a letter of same alphabet.
$\Sigma 1 = \{B, aB, bab, d\}$
$\Sigma 2 = \{B, Ba, bab, d\}$
$\Sigma 1$ is a valid alphabet while $\Sigma 2$ is an in-valid alphabet.

Length of Strings

The length of string s, denoted by |s|, is the number of letters in the string.

Example
$\Sigma = \{a,b\}$
s=ababa
|s|=5

Reverse of a String

The reverse of a string s denoted by Rev(s) or s^r, is obtained by writing the letters of s in reverse order.

Defining Languages
The languages can be defined in different ways , such as Descriptive definition, Recursive definition, using Regular Expressions(RE) and using Finite Automaton(FA) etc.

Descriptive definition of language
The language is defined, describing the conditions imposed on its words.

Automata Theory Lecture Notes:

Elements of Automata Theory Jacques Sakarovitch,2009-10-01 Automata theory lies at the foundation of computer science and is vital to a theoretical understanding of how computers work and what constitutes formal methods This treatise gives a rigorous account of the topic and illuminates its real meaning by looking at the subject in a variety of ways The first part of the book is organised around notions of rationality and recognisability The second part deals with relations between words realised by finite automata which not only exemplifies the automata theory but also illustrates the variety of its methods and its fields of application Many exercises are included ranging from those that test the reader to those that are technical results to those that extend ideas presented in the text Solutions or answers to many of these are included in the book   Lectures in Game Theory for Computer Scientists Krzysztof R. Apt,Erich Grädel,2011-01-06 Games provide mathematical models for interaction Numerous tasks in computer science can be formulated in game theoretic terms This fresh and intuitive way of thinking through complex issues reveals underlying algorithmic questions and clarifies the relationships between different domains This collection of lectures by specialists in the field provides an excellent introduction to various aspects of game theory relevant for applications in computer science that concern program design synthesis verification testing and design of multi agent or distributed systems Originally devised for a Spring School organised by the GAMES Networking Programme in 2009 these lectures have since been revised and expanded and range from tutorials concerning fundamental notions and methods to more advanced presentations of current research topics This volume is a valuable guide to current research on game based methods in computer science for undergraduate and graduate students It will also interest researchers working in mathematical logic computer science and game theory   **Theory And Formal Methods Of Computing 94: Proceedings Of The Second Imperial College Workshop** Chris Hankin,I Mackie,Rajagopal Nagarajan,1995-10-17 The focus of this workshop was the development of mathematically based techniques of formal specification of system behaviour and the systematic development of implementations The aim is to produce correct efficient implementations in a reliable fashion Topics covered at the workshop include category theory logic domain theory semantics concurrency specification and verification The papers published here range from the purely theoretical to practical applications   **Sequences, Groups, and Number Theory** Valérie Berthé,Michel Rigo,2018-04-09 This collaborative book presents recent trends on the study of sequences including combinatorics on words and symbolic dynamics and new interdisciplinary links to group theory and number theory Other chapters branch out from those areas into subfields of theoretical computer science such as complexity theory and theory of automata The book is built around four general themes number theory and sequences word combinatorics normal numbers and group theory Those topics are rounded out by investigations into automatic and regular sequences tilings and theory of computation discrete dynamical systems ergodic theory numeration systems automaton semigroups and amenable groups This volume is intended for use by

graduate students or research mathematicians as well as computer scientists who are working in automata theory and formal language theory With its organization around unified themes it would also be appropriate as a supplemental text for graduate level courses **CONCUR '98 Concurrency Theory** Davide Sangiorgi,Robert de Simone,1998-08-19 This book constitutes the refereed proceedings of the 9th International Conference on Concurrency Theory CONCUR 98 held in Nice France in September 1998 The 35 revised full papers presented were carefully selected from a total of 104 submissions Also presented are five invited contributions Among the topics covered are moduls of computation and semantic domains process algebras Petri Nets event structures real time systems hybrid systems model checking verification techniques refinement rewriting typing systems and algorithms etc **CONCUR 2004 -- Concurrency Theory** Philippa Gardner,Nobuko Yoshida,2011-03-22 This book constitutes the refereed proceedings of the 15th International Conference on Concurrency Theory CONCUR 2004 held in London UK in August September 2004 The 29 revised full papers presented together with 4 invited papers were carefully reviewed and selected from 134 submissions Among the topics covered are concurrency related aspects of models of computation semantic domains process algebras Petri nets event structures real time systems hybrid systems decidability model checking verification techniques refinement term and graph rewriting distributed programming constraint logic programming object oriented programming typing systems and algorithms case studies tools and environments for programming and verification *Automata Theory and Formal Languages* H. Brakhage,1975 **A Course in Formal Languages, Automata and Groups** Ian M. Chiswell,2008-11-14 This book is based on notes for a master s course given at Queen Mary University of London in the 1998 9 session Such courses in London are quite short and the course consisted essentially of the material in the rst three chapters together with a two hour lecture on connections with group theory Chapter 5 is a considerably expanded version of this For the course the main sources were the books by Hopcroft and Ullman 20 by Cohen 4 and by Epstein et al 7 Some use was also made of a later book by Hopcroft and Ullman 21 The ulterior motive in the rst three chapters is to give a rigorous proof that various notions of recursively enumerable language are equivalent Three such notions are considered These are generated by a type 0 grammar recognised by a Turing machine deterministic or not and de ned by means of a Godel numbering having de ned recursively enumerable for sets of natural numbers It is hoped that this has been achieved without too many ar ments using complicated notation This is a problem with the entire subject and it is important to understand the idea of the proof which is often quite simple Two particular places that are heavy going are the proof at the end of Chapter 1 that a language recognised by a Turing machine is type 0 and the proof in Chapter 2 that a Turing machine computable function is partial recursive Foundations of Software Science and Computational Structures Helmut Seidl,2007-03-09 This book constitutes the refereed proceedings of the 10th International Conference on Foundations of Software Science and Computation Structures FOSSACS 2007 held in Braga Portugal in March April 2007 as part of ETAPS 2007 the European Joint Conferences on Theory and Practice of

Software The 25 revised full papers presented together with the abstract of 1 invited talk were carefully reviewed and selected from 103 submissions The papers cover a broad spectrum on theories and methods to support analysis synthesis transformation and verification of programs and software systems In particular the following topics are dealt with algebraic models automata and language theory behavioral equivalences categorical models computation processes over discrete and continuous data infinite state systems computation structures logics of programs modal spatial and temporal logics models of concurrent reactive distributed and mobile systems process algebras and calculi semantics of programming languages software specification and refinement type systems and type theory fundamentals of security semi structured data program correctness and verification   **Fundamentals of Computation Theory** ,1999   *Automata and Computability* Dexter C.
