Understanding Daily Rainfall Variability Over Tekeze River Basin:

Understanding Daily Rainfall Variability Over Tekeze River Basin Michale Gebrekiros Gebreselassie, Semu Ayalew Moges, 2013 In a largely rain fed agriculture country like Ethiopia understanding the spatial and temporal variability of rainfall provides an understanding to improving rainfall water productivity and operational water managements of reservoirs This book describes the methods with their application on quantifying the spatial and temporal variability of daily rainfall at Tekeze river basin Ethiopia We hope this book greatly adds perspective to researchers and planners working in the areas of agriculture water resources management and civil engineering *Understanding the Impact of Human Interventions on the Hydrology of Nile Basin Headwaters, the Case of Upper Tekeze Catchments* Tesfay Gebremicael, 2019-11-26 The availability and distribution of water resources in catchments are influenced by various natural and anthropogenic factors Human induced environmental changes are key factors controlling the hydrological flows of semi arid catchments Land degradation water scarcity and inefficient utilization of available water resources continue to be important constraints for socio economic development in the headwater catchments of the Nile river basin in particular over the Ethiopian Catchments This research investigates the impact of landscape anthropogenic changes on the hydrological processes in the Upper Tekeze basin A tributary of the Nile The hydrology of the basin is investigated through analysis of hydro climatic data remote sensing techniques new field measurements and parsimonious hydrological models The empirical evidence provided in this book confirms that human induced environmental changes can significantly change the hydrology of catchments both in negative degradation and in positive restoration ways This book also shows that rainfall runoff relationships in semi arid catchments are non uniform and hence the application of hydrological models in such catchments need special attention Moreover parsimonious dynamic hydrological model improves our understanding of the hydrological response to dynamic environmental changes **Advances in drought analytical tools for better understanding of current and future climate change**, 2023-03-14 *Extreme Hydrology and Climate Variability* Assefa Melesse, Wossenu Abtew, Gabriel Senay, 2019-07-03 *Extreme Hydrology and Climate Variability Monitoring Modelling Adaptation and Mitigation* is a compilation of contributions by experts from around the world who discuss extreme hydrology topics from monitoring to modeling and management With extreme climatic and hydrologic events becoming so frequent this book is a critical source adding knowledge to the science of extreme hydrology Topics covered include hydrometeorology monitoring climate variability and trends hydrological variability and trends landscape dynamics droughts flood processes and extreme events management adaptation and mitigation Each of the book s chapters provide background and theoretical foundations followed by approaches used and results of the applied studies This book will be highly used by water resource managers and extreme event researchers who are interested in understanding the processes and teleconnectivity of large scale climate dynamics and extreme events predictability simulation and intervention measures Presents datasets used and methods followed to

support the findings included allowing readers to follow these steps in their own research Provides variable methodological approaches thus giving the reader multiple hydrological modeling information to use in their work Includes a variety of case studies thus making the context of the book relatable to everyday working situations for those studying extreme hydrology Discusses extreme event management including adaption and mitigation

Landscape Dynamics, Soils and Hydrological Processes in Varied Climates Assefa M. Melesse, Wossenu Abtey, 2015-07-21 The book presents the processes governing the dynamics of landscapes soils and sediments water and energy under different climatic regions using studies conducted in varied climatic zones including arid semi arid humid and wet regions The spatiotemporal availability of the processes and fluxes and their linkage to the environment land soil and water management are presented at various scales Spatial scales including laboratory field watershed river basin and regions are represented The effect of tillage operations and land management on soil physical characteristics and soil moisture is discussed The book has 35 chapters in seven sections 1 Landscape and Land Cover Dynamics 2 Rainfall Runoff Processes 3 Floods and Hydrological Processes 4 Groundwater Flow and Aquifer Management 5 Sediment Dynamics and Soil Management 6 Climate change impact on vegetation sediment and water dynamics and 7 Water and Watershed Management

The Nile River Abdelazim M. Negm, 2017-05-31 This volume offers up to date and comprehensive information on various aspects of the Nile River which is the main source of water in Egypt The respective chapters examine the Nile journey the Aswan High Dam Reservoir morphology and sediment quality of the Nile threats to biodiversity fish and fisheries rain fed agriculture rainfall data and fluctuations in rainfall the impact of climate change and hydropolitics and legal aspects The book closes with a concise summary of the conclusions and recommendations provided in the preceding chapters and discusses the requirements for the sustainable development of the Nile River and potential ways to transform conflicts into cooperation Accordingly it offers an invaluable source of information for researchers graduate students and policymakers alike

Hydropower in the New Millennium B. Honningsvag, G.H. Midttomme, K. Repp, K. Vaskinn, T. Westernen, 2001-01-01 The power sector has undergone a liberalization process both in industrialized and developing countries involving market regimes as well as ownership structure These processes have called for new and innovative concepts affecting both the operation of existing hydropower plants and transmission facilities as well as the development and implementation of new projects At the same time a sharper focus is being placed on environmental considerations In this context it is important to emphasize the obvious benefits of hydropower as a clean renewable and sustainable energy source It is however also relevant to focus on the impact on the local environment during the planning and operation of hydropower plants New knowledge and methods have been developed that make it possible to mitigate the local undesirable effects of such projects Development and operation of modern power systems require sophisticated technology Continuous research and development in this field is therefore crucial to maintaining hydropower as a

Understanding Rainfall Variability Over West Africa and Climate Sensitivity in the Tropics Gang Zhang (Ph. D.),2015
West African rainfall plays an important role in tropical climate and hydrological cycle This study aims to advance our understanding of the West African rainfall across different timescales from the diurnal cycle to interannual variations Then the study is extended to understand the climate sensitivity in the tropics with an increase of greenhouse gases First on a short timescale the diurnal cycle of warm season rainfall over West Africa is investigated In both the climatology and the 2006 case study most of West Africa shows a single diurnal peak of rainfall in either the afternoon or at night Afternoon rainfall peaks are associated with an unstable lower troposphere Nocturnal rainfall peaks are associated with rainfall systems propagating westward They occur most frequently about 3 10 of longitude downstream of regions with afternoon rainfall peaks Rainfall systems in the convection permitting simulation show similar westward propagation with afternoon peaks associated with elevated topography and nocturnal peaks downstream of the topographic afternoon rainfall regions However the model fails to reproduce the observed afternoon rainfall peaks in several regions far away from the downstream of elevated topography Second on a longer timescale the climatology and interannual variations of the West African monsoon demise are investigated using the Tropical Rainfall Measuring Mission and the Global Precipitation Climatology Project precipitation datasets along with the ERA Interim reanalysis During monsoon demise the rainfall maximum progresses southward smoothly from the Sahel to the Gulf of Guinea The climatological monsoon demise date is October 20th The demise date varies between October 5th and 30th An early late demise is associated with an anomalously strong weak North Atlantic subtropical high The monsoon season total rainfall is found to be significantly correlated with the demise date Finally idealized regional model simulations are used to understand the climate sensitivity over the broad tropical region The model is configured with idealized continents and oceans With a doubling of CO₂ the land and the ocean warm at different rates The changes of the continental heat lows subtropical highs and land based rainfall in the tropics are explored and linked to the surface warming Stochastic Methods In Hydrology: Rain, Landforms And Floods Ole E Barndorff-nielsen,Vijay Gupta,Victor Perez-abreu,Edward C Waymire,1998-03-31 This book communicates some contemporary mathematical and statistical developments in river basin hydrology as they pertain to space time rainfall spatial landform and network structures and their role in understanding averages and fluctuations in the hydrologic water balance of river basins While many of the mathematical and statistical nations have quite classical mathematical roots the river basin data structure has led to many variations on the problems and theory *Understanding Spatial Variability of Rainfall in the Southeast U.S.A. at Different Timescales* Guillermo A.
