The Native Orchids of Florida Carlyle A. Luer,1972 In the year 1957 my wife and I were fascinated when we saw a flower of *Polyrrhiza lindenii* We were greatly impressed when we learned that this amazing leafless orchid the flower of which resembles the ghoulish ghost of a frog leaping in mid air was a native of our own state of Florida We became excited over plans to find one which we accomplished without too much trouble except for getting our feet wet The fun we had in finding this species and the photographs we took home as lasting trophies led us from one orchid to another This was only the beginning of a hobby which was soon to develop into a gigantic effort to find and photograph every species of orchid known to have occurred naturally in Florida and eventually to publish this book As years wore on horizons widened A second volume on the native orchids of the United States and Canada exclusive of those species found only in the southeasternmost states contained in this volume will follow Many monographs on local orchid flora have appeared throughout the years The present work has been designed first of all for orchidophiles like ourselves be they amateur or professional With the treatises of Morris and Eames and of Correll as basic guides each genus is described as a separate chapter Since the recognition of a plant by a technical description and line drawings may be difficult especially for an amateur a series of photographs in color has been assembled which will provide the reader with a greater feeling of familiarity with each species something we have always wanted to see ourselves With very few exceptions each species has been pictured in its native habitat Close up portraits of individual flowers and such interesting features as roots fruit and unusual variations have been included

The Orchid World Gurney Wilson,1912 **The orchid-grower's manual** Benjamin Samuel Williams,1885 *Orchids for Amateurs ... With Illustrations* James Britten,William Hugh Gower,1878 Challenges and Opportunities in Orchid Ecology and Conservation Pavel Kindlmann,Tiiu Kull,Dennis Whigham,2023-08-02 Understanding diversity patterns and the effect of global change on abundance distribution patterns and species survival are of the most discussed topics in biodiversity research Species are disappearing worldwide mostly due to habitat loss but other factors like climate change are likely to increase in importance during the 21st century Thus one of the most worrying issues is that we still do not know the optimal abiotic and biotic requirements for population persistence of many of the still existing species which makes it very difficult if not impossible to make appropriate recommendations for their conservation in terms of proposing an effective management of their sites Analysis of these requirements is however strongly dependent on the taxonomic group considered and on life history strategies of the species that comprise the group In this Research Topic we concentrate on this issue applied to orchids one of the most abundant groups of flowering plants with approximately 30 000 species They are classified among the most threatened groups worldwide Of the approximately 1000 species that have been evaluated almost 60% are threatened endangered or extinct For a few orchid species detailed records from monitoring efforts provide opportunities for comparative analyses of species declines through time However for most orchid species we still lack population data and there have been few studies that have focused on the environmental factors and species traits associated with the decline of orchid sites and species numbers

Spathoglottis Primrose produced numerous magnificent hybrids and won countless awards in Singapore and elsewhere. These hybrids served to enrich the country's orchid mystique. In the opening chapter of this volume, Dr. Teoh Eng Soon, Western-style orchid breeder, grower, and author, writes about some of the breeders who contributed to the Singapore orchid fame.
