Coders at Work Peter Seibel, 2010-05-04 Peter Seibel interviews 15 of the most interesting computer programmers alive today in *Coders at Work* offering a companion volume to Apress's highly acclaimed best seller *Founders at Work* by Jessica Livingston. As the words at work suggest Peter Seibel focuses on how his interviewees tackle the day to day work of programming while revealing much more like how they became great programmers how they recognize programming talent in others and what kinds of problems they find most interesting. Hundreds of people have suggested names of programmers to interview on the *Coders at Work* web site www.codersatwork.com. The complete list was 284 names. Having digested everyone's feedback we selected 15 folks who've been kind enough to agree to be interviewed. Frances Allen Pioneer in optimizing compilers first woman to win the Turing Award 2006 and first female IBM fellow. Joe Armstrong Inventor of Erlang. Joshua Bloch Author of the Java collections framework now at Google. Bernie Cosell One of the main software guys behind the original ARPANET IMPs and a master debugger. Douglas Crockford JSON founder JavaScript architect at Yahoo. L. Peter Deutsch Author of Ghostscript implementer of Smalltalk 80 at Xerox PARC and Lisp 1.5 on PDP 1. Brendan Eich Inventor of JavaScript CTO of the Mozilla Corporation. Brad Fitzpatrick Writer of LiveJournal OpenID memcached and Perlbal. Dan Ingalls Smalltalk implementor and designer. Simon Peyton Jones Coinventor of Haskell and lead designer of Glasgow Haskell Compiler. Donald Knuth Author of *The Art of Computer Programming* and creator of TeX. Peter Norvig Director of Research at Google and author of the standard text on AI. Guy Steele Coinventor of Scheme and part of the Common Lisp Gang of Five currently working on Fortress. Ken Thompson Inventor of UNIX. Jamie Zawinski Author of XEmacs and early Netscape Mozilla hacker.

All code examples are presented in a fully integrated Processing example library making it easy for readers to get started. This unique and finely balanced approach between skill acquisition and the creative process and development makes *Coding Art* a functional reference book for both creative programming and the creative process for professors and students alike. You will Review ideas and approaches from creative programming to different professional domains. Work with computational tools like the Processing language. Programming Interviews Exposed John Mongan,Noah Suojanen Kindler,Eric Giguère,2018-04-17 Ace technical interviews with smart preparation Programming Interviews Exposed is the programmer's ideal first choice for technical interview preparation Updated to reflect changing techniques and trends this new fourth edition provides insider guidance on the unique interview process that today's programmers face Online coding contests are being used to screen candidate pools of thousands take home projects have become commonplace and employers are even evaluating a candidate's public code repositories at GitHub and with competition becoming increasingly fierce programmers need to shape themselves into the ideal candidate well in advance of the interview This book doesn't just give you a collection of questions and answers it walks you through the process of coming up with the solution so you learn the skills and

techniques to shine on whatever problems you're given. This edition combines a thoroughly revised basis in classic questions involving fundamental data structures and algorithms with problems and step-by-step procedures for new topics including probability, data science, statistics, and machine learning, which will help you fully prepare for whatever comes your way. Learn what the interviewer needs to hear to move you forward in the process. Adopt an effective approach to phone screens with non-technical recruiters. Examine common interview problems and tests with expert explanations. Be ready to demonstrate your skills verbally in contests on GitHub and more. Technical jobs require the skillset, but you won't get hired unless you are able to effectively and efficiently demonstrate that skillset under pressure in competition with hundreds of others with the same background.

Dooley, Vera Kazakova, 2024-07-06. Learn the principles of good software design and then turn those principles into great code. This book introduces you to software engineering from the application of engineering principles to the development of software. You'll see how to run a software development project, examine the different phases of a project, and learn how to design and implement programs that solve specific problems. This book is also about code construction: how to write great programs and make them work. This new third edition is revamped to reflect significant changes in the software development landscape with updated design and coding examples and figures. Extreme programming takes a backseat, making way for expanded coverage of the most crucial agile methodologies today: Scrum, Lean Software Development, Kanban, and Dark Scrum. Agile principles are revised to explore further functionalities of requirement gathering. The authors venture beyond imperative and object-oriented languages, exploring the realm of scripting languages in an expanded chapter on Code Construction. The Project Management Essentials chapter has been revamped and expanded to incorporate SoftAware Development to discuss the crucial interpersonal nature of joint software creation. Whether you're new to programming or have written hundreds of applications, in this book you'll re-examine what you already do and you'll investigate ways to improve. Using the Java language, you'll look deeply into coding standards, debugging, unit testing, modularity, and other characteristics of good programs.

You Will Learn: Modern agile methodologies; How to work on and with development teams; How to leverage the capabilities of modern computer systems with parallel programming; How to work with design patterns to exploit application development best practices; How to use modern tools for development collaboration and source code controls.
