Gleim, 1978      **Linear Optimization Problems with Inexact Data** Miroslav Fiedler, Josef Nedoma, Jaroslav Ramik, Jiri Rohn, Karel Zimmermann, 2006-07-18

Linear programming attracted the interest of mathematicians during and after World War II when the first computers were constructed and methods for solving large linear programming problems were sought in connection with specific practical problems for example providing logistical support for the U S Armed Forces or modeling national economies Early attempts to apply linear programming methods to solve practical problems failed to satisfy expectations There were various reasons for the failure One of them which is the central topic of this book was the inexactness of the data used to create the models This phenomenon inherent in most practical problems has been dealt with in several ways At first linear programming models used average values of inherently vague coefficients but the optimal solutions of these models were not always optimal for the original problem itself Later researchers developed the stochastic linear programming approach but this too has its limitations Recently interest has been given to linear programming problems with data given as intervals convex sets and or fuzzy sets The individual results of these studies have been promising but the literature has not presented a unified theory

Books on a technical topic like linear programming without exercises ignore the principal beneficiary of the endeavor of writing a book namely the student who learns best by doing course Books with exercises if they are challenging or at least to

some extent so exercises of need a solutions manual so that students can have recourse to it when they need it Here we give solutions to all exercises and case studies of M Padberg s Linear Optimization and Extensions second edition Springer Verlag Berlin 1999 In addition we have included several new exercises and taken the opportunity to correct and change some of the exercises of the book Here and in the main text of the present volume the terms book text etc designate the second edition of Padberg s LPbook and the page and formula references refer to that edition as well All new and changed exercises are marked by a star in this volume The changes that we have made in the original exercises are inconsequential for the main part of the original text where several of the exercises especially in Chapter 9 are used on several occasions in the proof arguments None of the exercises that are used in the estimations etc have been changed
