*Python Lab1 Excel Openpyxl* Cathy Young, R. Zimmerman, 2019-11-30 1 New Release Color Edition 7x10 Are you curious about the Python language and wondering how to read and write Excel files This book is a hands on lab with simple code examples that perform one basic task compare two Excel files and output an Excel file of differences At the end

of the lab you will know enough about Python to work with your own Excel files even if you're new to Python or programming. My examples use the free Anaconda data science platform Python 3.7 running on a Windows computer utilizing the Spyder application. The step by step examples walk through each line of code with screenshots of the corresponding Excel files so you can follow along as the program moves through the code. In the course of the lab you'll learn these Python concepts:

- 1 What is a Library
- 2 Comments
- 3 Strings Types Tuples and Variables
- 4 If else statements for comparing data
- 5 While loops for working with rows of Excel data
- 6 Working with the file system files directories
- 7 Creating functions and importing them into your main code file
- 8 Working with Excel files using openpyxl

The lab has two parts. Part 1 accomplishes the basic tasks to compare the two Excel files. I think of this as the core code that gets the job done. Part 2 adds some nice to have features: Format headings and column widths in the output Excel file, Search for strings and substrings, Find New Items or Retired Items, Compare Dates, Delete Rows, Delete Worksheets, Check if the output Excel file already exists in your filesystem and delete it if it does exist, Create functions and call them from your main code file. Please note I don't attempt to cover all aspects of Python only those concepts needed to complete this lab. If you said "Show me what I need to start using Python with Excel files" this lab answers that simple question. After you complete the lab you'll definitely be able to say you can program in Python. Python is really powerful and I hope you enjoy the lab and want to continue to expand your Python skills in the future. In my opinion a working code example takes all the guesswork out of programming leaving just the fun of learning something new. You don't have to wonder if you have the correct indentation, your counter is in the right place or if you forgot the colon at the end of the line when you defined your function. Are you ready? Let's get started.

Step by step instructions which take you through each program to automate monotonous tasks with Python 3.7. Key Features:

- Automate integral business processes such as report generation, email marketing and lead generation.
- Build your first web application that scrapes data and accesses websites APIs.
- Create graphic rich charts, graphs and maps using Matplotlib.

**Book Description:** Have you been doing the same old monotonous office work over and over again? Or have you been trying to find an easy way to make your life better by automating some of your repetitive tasks? Through a tried and tested approach, understand how to automate all the boring stuff using Python. The Python Automation Cookbook helps you develop a clear understanding of how to automate your business processes using Python, including detecting opportunities by scraping the web, analyzing information to generate automatic spreadsheets, reports with graphs and communicating with automatically generated emails. You'll learn how to get notifications via text messages and run tasks while your mind is focused on other important activities followed by understanding how to scan documents such as resumes. Once you've gotten familiar with the fundamentals, you'll be introduced to the world of graphs along with studying how to produce organized charts using Matplotlib. In addition to this, you'll gain in depth knowledge of how to generate rich graphics showing relevant information. By the end of this book, you'll

have refined your skills by attaining a sound understanding of how to identify and correct problems to produce superior and reliable systems What you will learn Get to grips with scraping a website to detect changes Search and process raw sales files to aggregate information in spreadsheets Explore techniques to extract information from an Excel spreadsheet and generate exciting reports with graphs Discover the techniques required to generate random print friendly codes to be used as single use coupons Automatically generate a marketing campaign contacting the recipients over different channels Identify and implement precise solutions Who this book is for The Python Automation Cookbook is for you if you are a developer or anyone who wants to automate monotonous manual tasks related to fields such as finance sales and HR among others **Pandas**
