Nucleation in Condensed Matter Ken Kelton, Alan Lindsay Greer, 2010-03-19 In Nucleation in Condensed Matter key theoretical models for nucleation are developed and experimental data are used to discuss their range of validity A central aim of this book is to enable the reader when faced with a phenomenon in which nucleation appears to play a role to determine whether nucleation is indeed important and to develop a quantitative and predictive description of the nucleation behavior The third section of the book examines nucleation processes in practical situations ranging from solid state precipitation to nucleation in biological systems to nucleation in food and drink Nucleation in Condensed Matter is a key reference for an advanced materials course in phase transformations It is also an essential reference for researchers in the field Unified treatment of key theories experimental evaluations and case studies Complete derivation of key models Detailed discussion of experimental measurements Examples of nucleation in diverse systems *Continuants* David Wiggins, 2016-11-17 This volume gathers twelve essays by David Wiggins in an area where his work has been particularly influential Among the subjects treated are persistence of a substance through change the notion of a continuant the logic of identity the co occupation of space by a continuant and its matter the relation of person to human organism the metaphysical idea of a person the status of artefacts the relation of the three dimensional and four dimensional conceptions of reality and the nomological underpinning of sortal classification From a much larger body of work the author has selected edited or annotated and variously shortened or extended eleven pieces He has added an Introduction and one completely new essay on the philosophy of biology and the role there of the idea of process The collection begins with an essay postdating his *Sameness and Substance Renewed* 2001 which amends and upstages his earlier presentation of his sortalist conception of identity In subsequent essays and the introduction Wiggins examines the contributions to these subjects made by Heraclitus Aristotle Leibniz Roderick Chisholm Hilary Putnam Sydney Shoemaker Michael Ayers Saul Kripke W V Quine David Lewis Fei Xu and others *La Selva* Lucinda A. McDade, 1994-03-18 Abiotic environment and ecosystem processes The plant community Composition dynamics and life history processes The animal community Plant animal interactions La selva s human environment **From Political Economy to Economics** Dimitris Milonakis, Ben Fine, 2009-01-13 Economics has become a monolithic science variously described as formalistic and autistic with neoclassical orthodoxy reigning supreme So argue Dimitris Milonakis and Ben Fine in this new major work of critical recollection The authors show how economics was once rich diverse multidimensional and pluralistic and unravel the processes that lead to orthodoxy s current predicament The book details how political economy became economics through the desocialisation and the dehistoricisation of the dismal science accompanied by the separation of economics from the other social sciences especially economic history and sociology It is argued that recent attempts from within economics to address the social and the historical have failed to acknowledge long standing debates amongst economists historians and other social scientists This has resulted in an impoverished

historical and social content within mainstream economics The book ranges over the shifting role of the historical and the social in economic theory the shifting boundaries between the economic and the non economic all within a methodological context Schools of thought and individuals that have been neglected or marginalised are treated in full including classical political economy and Marx the German and British historical schools American institutionalism Weber and Schumpeter and their programme of Social konomik and the Austrian school At the same time developments within the mainstream tradition from marginalism through Marshall and Keynes to general equilibrium theory are also scrutinised and the clashes between the various camps from the famous Methodenstreit to the fierce debates of the 1930s and beyond brought to the fore The prime rationale underpinning this account drawn from the past is to put the case for political economy back on the agenda This is done by treating economics as a social science once again rather than as a positive science as has been the inclination since the time of Jevons and Walras It involves transcending the boundaries of the social sciences but in a particular way that is in exactly the opposite direction now being taken by economics imperialism Drawing on the rich traditions of the past the reintroduction and full incorporation of the social and the historical into the main corpus of political economy will be possible in the future
