is critical for the friction designer the product engineer the process manager application engineer or purchasing agents to understand the shear strength and the main influencing factors that will ultimately determine the amount of shear load that the material will withstand without a mechanical failure of the assembly This revision of the Recommended Practice increases the level of harmonization with other industry standards allows the testing of mechanical retention systems MRS includes the option of testing with the movable ram at constant speed allows the use of coupons and improves the repeatability of the test results by introducing the application of a side load for disc brake pads
