case studies *Oil and Gas Processing Equipment* G. Unnikrishnan, 2020-09-14 Oil and gas industries apply several techniques for assessing and mitigating the risks that are inherent in its operations In this context the application of Bayesian Networks BNs to risk assessment offers a different probabilistic version of causal reasoning Introducing probabilistic nature of hazards conditional probability and Bayesian thinking it discusses how cause and effect of process hazards can be modelled using BNs and development of large BNs from basic building blocks Focus is on development of BNs for typical equipment in industry including accident case studies and its usage along with other conventional risk assessment methods Aimed at professionals in oil and gas industry safety engineering risk assessment this book Brings together basics of Bayesian theory Bayesian Networks and applications of the same to process safety hazards and risk assessment in the oil and gas industry Presents sequence of steps for setting up the model populating the model with data and simulating the model for practical cases in a systematic manner Includes a comprehensive list on sources of failure data and tips on modelling and simulation of large and complex networks Presents modelling and simulation of loss of containment of actual equipment in oil and gas industry such as Separator Storage tanks Pipeline Compressor and risk assessments Discusses case studies to demonstrate the practicability of use of Bayesian Network in routine risk assessments
