Solved Problems In Geostatistics:

Solved Problems in Geostatistics Oy Leuangthong, K. Daniel Khan, Clayton V. Deutsch, 2011-09-20 This unique book presents a learn by doing introduction to geostatistics. Geostatistics provides the essential numerical tools for addressing research problems that are encountered in fields of study such as geology, engineering, and the earth sciences. Illustrating key methods through both theoretical and practical exercises, *Solved Problems in Geostatistics* is a valuable and well-organized collection of worked-out problems that allow the reader to master the statistical techniques for modeling data in the geological sciences. The book's scope of coverage begins with the elements from statistics and probability that form the foundation of most geostatistical methodologies such as declustering, debiasing methods, and Monte Carlo simulation. Next, the authors delve into three fundamental areas in conventional geostatistics: covariance and variogram functions, kriging, and Gaussian simulation. Finally, special topics are introduced through problems involving utility theory, loss functions, and multiple point geostatistics. Each topic is treated in the same clearly organized format: first, an objective presents the main concepts that will be established in the section; next, the background and assumptions are outlined, supplying the comprehensive foundation that is necessary to begin work on the problem; a solution plan demonstrates the steps and considerations that have to be taken when working with the exercise, and the solution allows the reader to check their work; finally, a remarks section highlights the overarching principles and noteworthy aspects of the problem. Additional exercises are available via a related Web site which also includes data related to the book problems and software programs that facilitate their resolution. Enforcing a truly hands-on approach to the topic, *Solved Problems in Geostatistics* is an indispensable supplement for courses on geostatistics and spatial statistics at the upper undergraduate and graduate levels. It also serves as an applied reference for practicing professionals in the geosciences.

Agricultural Internet of Things and Decision Support for Precision Smart Farming Annamaria Castrignano, Gabriele Buttafuoco, Raj Khosla, Abdul Mouazen, Dimitrios Moshou, Olivier Naud, 2020-01-09 *Agricultural Internet of Things and Decision Support for Smart Farming* reveals how a set of key enabling technologies (KET) related to agronomic management, remote and proximal sensing, data mining, decision making, and automation can be efficiently integrated in one system. Chapters cover how KETs enable real-time monitoring of soil conditions, determine real-time site-specific requirements of crop systems, help develop a decision support system (DSS) aimed at maximizing the efficient use of resources, and provide planning for agronomic inputs differentiated in time and space. This book is ideal for researchers, academics, post-graduate students, and practitioners who want to embrace new agricultural technologies. Presents the science behind smart technologies for agricultural management. Reveals the power of data science and how to extract meaningful insights from big data on what is most suitable based on individual time and space. Proves how advanced technologies used in agriculture practices can become site-specific, locally adaptive, operationally feasible, and economically affordable.
