corporate interested in the developments in fault analytics in LTE networks   Handover Optimisation Using Neural Networks Within LTE Neil Sinclair,2013 Mobile communication infrastructures are getting more complex with the addition of femtocells into the network architecture Allied with this the increased use of smart phones add strain onto the network because of higher data requirements Femtocells are a useful resource to reduce the demand on the macrocell layer and effective handover management is needed to transfer services to and from each base station The importance of handover management is high within LTE and is included within a use case of Self Organizing Networks Base stations can autonomously decide whether handover should take place and assign the values of relevant parameters Setting relevant parameters effectively requires more delicate attention with femtocells to allow for effective and seamless handover to the macrocell Novel approaches with small amounts of additional signal processing can be utilised to improve handover efficiency In this thesis variations of Self Organising Maps have been implemented Self Organising Maps can be used to learn the locations of the indoor environment from where handover requests have occurred and based on previous experience decide whether to permit or prohibit these handovers Once the neural network has adapted to the indoor environment handover can be optimised in different regions independently while still permitting necessary handover The results of the investigations described within this thesis show that utilising location within the handover process is en effective way to improve handover performance within an indoor environment using an LTE femtocell   Demonstration of an Effective 4G LTE Network Simulator to Analyze Performance and Ensure Reliable Communication Naveen Narasimhaiah,2015 With the growing population technology is growing without any bounds With these advancements we have reached a footing where we cannot imagine the world without communications This dependability on communications strikes a need for highly reliable and cost effective communication technology from the perspective of the user as well as the service provider Though the 3GPP s Long Term Evolution LTE has been successful to mitigate most of the challenges there arises a need to foresee the cellular network evolution considering various factors like increase in number of users in a particular area urbanization etc and accordingly use the features of LTE to overcome the effects of them before actually deploying the network in the real world This thesis outlines the requirement for an effective 4G LTE simulator that can model the real world cellular network by considering the various effects on a wireless network like fading pathloss number of users and resource allocation It can then explore various aspects of 4G LTE that contributes towards design and analysis of the network performance for various scenarios supporting deployment of the new network for futuristic operation or optimizing the existing network In this study we closely look through a System level LTE Simulator developed by the Institute of Telecommunications of The Vienna University of Technology Austria Using this simulator we study different scheduling schemes to evaluate performance and demonstrate how important the role of scheduling scheme is to overcome network congestion We study various features of LTE that help in increasing throughput for various traffic models over a network and demonstrate the role of small cells in

increasing the overall throughput of the network by comparing with the existing macro cell network Various parameters are varied and results are obtained for various scenarios using the Vienna LTE simulator These results are then used to demonstrate how Quality of Service QoS capacity planning and resource management are achieved through LTE technology This study helps the service provider to offer reliable service at lower implementation cost and deploy a network that has ability to sustain the evolution **Understanding LTE with MATLAB** Houman Zarrinkoub,2014-01-28 An introduction to technical details related to the Physical Layer of the LTE standard with MATLAB The LTE Long Term Evolution and LTE Advanced are among the latest mobile communications standards designed to realize the dream of a truly global fast all IP based secure broadband mobile access technology This book examines the Physical Layer PHY of the LTE standards by incorporating three conceptual elements an overview of the theory behind key enabling technologies a concise discussion regarding standard specifications and the MATLAB algorithms needed to simulate the standard The use of MATLAB a widely used technical computing language is one of the distinguishing features of this book Through a series of MATLAB programs the author explores each of the enabling technologies pedagogically synthesizes an LTE PHY system model and evaluates system performance at each stage Following this step by step process readers will achieve deeper understanding of LTE concepts and specifications through simulations Key Features Accessible intuitive and progressive one of the few books to focus primarily on the modeling simulation and implementation of the LTE PHY standard Includes case studies and testbenches in MATLAB which build knowledge gradually and incrementally until a functional specification for the LTE PHY is attained Accompanying Web site includes all MATLAB programs together with PowerPoint slides and other illustrative examples Dr Houman Zarrinkoub has served as a development manager and now as a senior product manager with MathWorks based in Massachusetts USA Within his 12 years at MathWorks he has been responsible for multiple signal processing and communications software tools Prior to MathWorks he was a research scientist in the Wireless Group at Nortel Networks where he contributed to multiple standardization projects for 3G mobile technologies He has been awarded multiple patents on topics related to computer simulations He holds a BSc degree in Electrical Engineering from McGill University and MSc and PhD degrees in Telecommunications from the Institut Nationale de la Recherche Scientifique in Canada http www wiley com go zarrinkoub   Algorithm to Achieve Optimized Handover Margin in LTE System Venkatesh G. K.,Rao P. V.,Govardhan N.,2015-09-09 Long Term Evoluation is a wireless communication system to achieve high network capacity and high spectral efficiency Prediction of handover and deciding of handover in long term evolution systems is very complicated task Altering the parameters in order to achieve less delay in the handover then it has to be compromised with the system performance and user experience Handover parameters are manually set to obtain the better system performance by doing it will consume more time Due to increased cell number in Long Term Evolution systems the services are provided with higher speed With the increase in cell number the operating expenditure for managing them also increases Solution for

resolving this problem is by making use of self configuring and self optimizing method From these two techniques self optimization is well known for reducing operating expenditure The handover optimization techniques are analyzed for the stationary mobility users in the conventional method The main intention of our project is to obtain better handover performance **LTE Handover Performance Evaluation Based on Power Budget Handover Algorithm** José Bruno Iñiguez Chavarría,2014 LTE Long Term Evolution is a fourth generation cellular network technology that provides improved performance related to data rate coverage and capacity compared to legacy cellular systems In this context one of the main goals of LTE is to provide fast and seamless handover from one cell to another to meet a strict delay requirement while simultaneously keeping network management simple Hence the decision to trigger a handover is a crucial component in the design process of handover since the success and the efficiency to a large extent depends on the accuracy and timeliness of the decision The design of an efficient and successful handover requires a careful selection of HO parameters and the optimal setting of these The LTE standard supports two parameters to trigger the handover and select the target cell hysteresis margin and Time to Trigger TTT The research topic of this thesis which is LTE Handover Performance Evaluation Based on Power Budget Handover Algorithm focuses on different combinations or settings of HOM and TTT values to evaluate the handover performance based on Reference Signal Received Power RSRP measurement within certain deployment scenarios such as different UE speeds system loads and cell sizes The Power Budget Handover Algorithm PBHA picks the best hysteresis and time to trigger combinations to evaluate the system performance in terms of number of handovers signal to interference plus noise ratio SINR throughput delay and packet lost for UE s which are about to perform the handover *Improving LTE Handover Performance with Data Forwarding Mechanism* 潘彦均,2013 Understanding Lte with MATLAB Houman Zarrinkoub,2014-09-22 An introduction to technical details related to the Physical Layer of the LTE standard with MATLAB r The LTE Long Term Evolution and LTE Advanced are among the latest mobile communications standards designed to realize the dream of a truly global fast all IP based secure broadband mobile access technology This book examines the Physical Layer PHY of the LTE standards by incorporating three conceptual elements an overview of the theory behind key enabling technologies a concise discussion regarding standard specifications and the MATLAB r algorithms needed to simulate the standard The use of MATLAB r a widely used technical computing language is one of the distinguishing features of this book Through a series of MATLAB r programs the author explores each of the enabling technologies pedagogically synthesizes an LTE PHY system model and evaluates system performance at each stage Following this step by step process readers will achieve deeper understanding of LTE concepts and specifications through simulations Key Features Accessible intuitive and progressive one of the few books to focus primarily on the modeling simulation and implementation of the LTE PHY standard Includes case studies and testbenches in MATLAB r which build knowledge gradually and incrementally until a functional specification for the LTE PHY is attained Accompanying Web site includes all
