The Method of the Generalised Eikonal Michael V. Vesnik, 2015-07-24 Diffraction theory describes scattering mechanisms for waves of various physical nature scattered by objects of different shapes and materials This book proposes new methods to account for the contour shape edge profile and boundary conditions of three dimensional scatterers in particularly flat polygons and polyhedrals A standard method to refine the physical optics approximation PO is the heuristic method of edge waves MEW In comparison with MEW the presented approaches simplify the solving and refining the PO approximation without solving a corresponding two dimensional problem Furthermore these methods allow to take into account the field perturbation in the vicinity of vertices While the analytical formulas obtained by using these new approaches are as simple as in the PO case the accuracy can be even higher than for MEW On the basis of the developed methods construction of solutions for wave propagation in urban area and elastic wave diffraction including seismic waves are proposed The book is useful for specialists who solve scientific and engineering problems in wave propagation and for students and postgraduate students
