Law, 2010 The thematic set of 32 papers in this Special Publication celebrate the 100th anniversary of the 1907 Memoir on The Geological Structure of the North West Highlands of Scotland by placing the original findings in both historical and modern contexts and juxtaposing them against present day studies of deformation processes operating not only in the NW Highlands but also in other mountain belts

*Subseismic-Scale Reservoir Deformation* M. Ashton, S.J. Dee, O.P. Wennberg, 2018-01-02 In the current cost constrained environment for hydrocarbon exploitation increasing emphasis is being placed on robust subsurface description and a clear understanding of the range of uncertainty associated with reservoir models Structural heterogeneity particularly at the subseismic scale forms an integral part of these refined descriptions as it allows greater prediction of subsurface flow characteristics This volume examines the best current practice and new challenges in hydrocarbon reservoir characterization and modelling of small to subseismic deformation features through case studies experimental results and modelling The papers follow four themes characterization of deformation in porous sandstones novel characterization techniques quantifying and characterizing deformation in carbonates and modelling small scale features It includes a collection of papers from a two day international conference that brought academic and industry geoscientists and engineers together to discuss best current practice and new challenges in reservoir characterization and modelling of small to subseismic deformation features The volume should be of interest to geoscientists petrophysicists reservoir engineers and modellers

**Reservoir Quality of Clastic and Carbonate Rocks** P.J. Armitage, A.R. Butcher, J.M. Churchill, A.E. Csoma, C. Hollis, R.H. Lander, J.E. Omma, R.H. Worden, 2018-06-18 Reservoir quality is studied using a wide range of similar techniques in both sandstones and carbonates Sandstone and carbonate reservoir quality both benefit from the study of modern analogues and experiments but modelling approaches are currently quite different for these two types of reservoirs There are many common controls on sandstone and carbonate reservoir quality but also distinct differences due primarily to mineralogy Numerous controversies remain including the question of oil inhibition the key control on pressure solution and geochemical flux of material to or from reservoirs This collection of papers contains case study based examples of sandstone and carbonate reservoir quality prediction as well as modern analogue outcrop analogue modelling and advanced analytical approaches

Core Values: the Role of Core in Twenty-first Century Reservoir Characterization  
A. Neal, M. Ashton, L.S. Williams, S.J. Dee, T.J.H. Dodd, J.D. Marshall, 2023-11-21 Deep subsurface characterization technologies

and demands are changing rapidly within the energy industry In this swiftly evolving landscape the wide range of analyses performed on the rocks and fluids obtained from cores remain fundamental tools in managing subsurface uncertainty and associated risk During the energy transition large volumes of newly acquired and legacy core will be accessed to better understand both existing hydrocarbon resources and other subsurface energy related systems particularly for carbon capture utilization and storage CCUS geothermal energy and the long term storage of nuclear waste Through state of the art reviews and case studies this volume illustrates how innovative approaches continue to create value from both new and historical cores recovered for deep subsurface reservoir characterization and storage complex evaluation Such an assessment is timely given that the sector sits at a pivotal point in terms of changing technologies economics demographics skillsets and energy solutions

**Structural Geology in Reservoir Characterization** M. P. Coward,T. Sezgin Daltaban,H. Johnson,1998 The two main aims of this Special Publication are to capture the wide range of rapidly expanding research in this area which reflects the increasing importance of comprehensive structural characterization in static reservoir descriptions and to help promote synergy between the geosciences and petroleum engineering disciplines The first aim is addressed by the sixteen papers of the volume the majority of which cover a range of structural geological features particularly faulted and fractured reservoirs fault gouge properties fault seal potential and fluid flow simulation modelling in faulted and fractured reservoirs The papers draw heavily on experience obtained in the North Sea

**Continental Transpressional and Transtensional Tectonics** Robert E. Holdsworth,Robin A. Strachan,John F. Dewey,1998 Many present day and ancient continental deformation systems appear to have formed due to significantly oblique relative plate motions Transpression and transtension zones are formed where the oblique motions involve components of compression and extensions respectively This book covers the recent advances in our understanding or transpressional and transtensional deformation zones both in theory and in real geological settings from around the world The volume opens with an up to date overview of the topic that sets the scene for the more detailed papers

which follow The papers are grouped into four sections The first Modelling Transpression and Transtension includes a series of papers that discuss theoretical strain models in the context of field examples and analogue experiments The second section details the tectonic evolution of Continental Transform Zones and includes papers on the Dead Sea Transform western USA and Chile The third section Oblique Divergence Zones has papers on gravitational collapse in the Norwegian Caledonides and in SW North America the break up of Gondwana and a pull apart basin in northern China The final section on Oblique Convergence Zones has case studies from Brazil European Variscides Antarctica the Himalayas the Sierra Nevada batholith and Italy
