Korzun,2024-01-15 Applied mathematics modelling and computer simulation are central to many aspects of engineering and computer science and continue to be of intrinsic importance to the development of modern technologies This book presents the proceedings of AMMCS 2023 the 3rd International Conference on Applied Mathematics Modeling and Computer Simulation held on 12 and 13 August 2023 in Wuhan China The conference provided an ideal opportunity for scholars and researchers to communicate important recent developments in their areas of specialization to their colleagues and to scientists in related disciplines More than 250 submissions were received for the conference of which 133 were selected for presentation at the conference and inclusion here after a thorough peer review process These range from the theoretical and conceptual to strongly pragmatic papers addressing industrial best practice and cover topics such as mathematical modeling and application engineering applications and scientific computations and the simulation of intelligent systems The book explores practical experiences and enlightening ideas and will be of interest to researchers practitioners and to all those working in the fields of applied mathematics modeling and computer simulation **Fatigue Analysis of a Helical Compression Spring** Gaikwad Sunil,2015-01-23 The objective is to present experimentation modeling and analysis of compression spring for static fatigue Experimentation is carried out using load checking machine M006 for static analysis and for fatigue life analysis fatigue

testing machine M08 is used Modeling is done using CATIA V5 and ANSYS Analysis is carried out by using HYPERMESH as a pre processor NASTRAN as a solver And Hyper view as a post processor ANSYS14 0software was also used for analysis for better understanding and comparison result with NASTRAN From the study it is seen that the fatigue life of stainless steel compression spring is more as compared to that of hard drawn wire for same stiffness same load carrying capacity It is observed that the maximum stress is developed at the inner side of the spring coil The NASTRAN and ANSYS allowable design stress is found between the corresponding loads 3 N to 6 N Therefore it is concluded that the maximum safe pay load for the given specification of the helical compression spring is 4 N A comparative study has been made of a redesign spring with respect to stress fatigue life safe pay load
