**Data Abstraction and Problem Solving with C++** Frank M. Carrano,Paul Helman,Robert Veroff,1998 Focusing on data abstraction and data structures the second edition of this very successful book continues to emphasize the needs of both the instructor and the student The book illustrates the role of classes and abstract data types ADTs in the problem solving process as the foundation for an object oriented approach Throughout the next the distinction between specification and implementation is continually stressed The text covers major applications of ADTs such as searching a flight map and performing an event driven simulation It also offers early extensive coverage of recursion and uses this technique in many examples and exercises Overall the lucid writing style widespread use of examples and flexible coverage of material have helped make this a leading book in the field Book Jacket Structured and Object-oriented Problem Solving Using C++ Andrew C. Staugaard,2002 Welcome to the third edition of my C text The highly successful first edition was one of the first textbooks available for teaching C in the first programming course The text was introduced at the 1994 ACM Conference in Phoenix when many were arguing the virtues of teaching C and OOP versus Pascal and structured programming in the first programming course I argued at the time and still argue that students need to be taught problem solving early on using both the structured and object oriented paradigms and because of its hybrid nature C is the only language suited to learning both of these paradigms Since then many institutions have made the switch from Pascal to C for just this reason as well as the intense industry support for C language As a result this third edition continues to provide an introduction to both structured and object oriented problem solving techniques using the C language Of course many improvements have been made based on using the text in numerous classrooms all over the world since 1994 As with earlier editions the text starts from the beginning assuming no previous knowledge of C or any other programming language This text is appropriate for any introductory programming CS1 course using the C language as well as experienced programmers wanting an introduction to structured and object oriented problem solving techniques using the C language Book Preface **Data Abstraction and Problem Solving with C++** Frank M. Carrano,Janet J. Prichard,2005 Designed for a second course in computer science this textbook introduces the data abstraction technique for building walls between a program and its data structures and presents various abstract data types and their implementations as C classes The author

evaluates the advantages and disadvantages of array based and pointer based data structures and explains the concepts behind recursion inheritance polymorphism algorithm efficiency and balanced search trees Annotation 2004 Book News Inc Portland OR booknews com
