

PL/SQL interview questions and answers to evaluate junior developers

Q Can you explain the concept of mutating tables in PL/SQL and how to handle them?

Mutating tables in PL/SQL refer to tables that are being modified by a DML statement (INSERT, UPDATE, DELETE) while a trigger is firing. This situation can lead to inconsistencies and errors.

To handle mutating tables, developers can use several approaches:

- A**
- Defer the trigger execution using autonomous transactions
 - Use compound triggers (in Oracle 11g and later)
 - Redesign the logic to avoid the mutating table error

Look for candidates who can explain the concept clearly and provide at least one solution. Strong candidates might also discuss the pros and cons of each approach.
