Computer Recognition Systems Marek Kurzynski,Edward Puchala,Michal Wozniak,Andrzej

Zolnierrek, 2007-12-13 This book contains papers accepted for presentation at the 4 International Conference on Computer Recognition Systems CORES 05 May 22-25 2005 Rydzyna Castle Poland This conference is a continuation of a series of conferences on similar topics KOSYR organized each second year since 1999 by the Chair of Systems and Computer Networks Wroclaw University of Technology An increasing interest to those conferences paid not only by home but also by foreign participants inspired the organizers to transform them into conferences of international range Our expectations that the community of specialists in computer recognizing systems will find CORES 05 a proper form of maintaining the tradition of the former conferences have been confirmed by a large number of submitted papers Alas organizational constraints caused a necessity to narrow the acceptance criteria so that only 100 papers have been finally included into the conference program The area covered by accepted papers is still very large and it shows how vivacious is scientific activity in the domain of computer recognition methods and systems It contains various theoretical approaches to the recognition problem based on mathematical statistics fuzzy sets morphological methods wavelets syntactic methods genetic algorithms artificial neural networks ontological models etc Most attention is still paid to visual objects recognition however acoustic textual and other objects are also considered Among application areas medical problems are in majority recognition of faces speech signals and textual information processing methods being also investigated

Sensor and Data Fusion Lawrence A. Klein, 2004 This book illustrates the benefits of sensor fusion by considering the characteristics of infrared microwave and millimeter wave sensors including the influence of the atmosphere on their performance Applications that benefit from this technology include vehicular traffic management remote sensing target classification and tracking weather forecasting military and homeland defense Covering data fusion algorithms in detail Klein includes a summary of the information required to implement each of the algorithms discussed and outlines system application scenarios that may limit sensor size but that require high resolution data

Pattern Recognition J. P. Marques de Sá, 2001 The book provides a comprehensive view of Pattern Recognition concepts and methods illustrated with real life applications in several areas It is appropriate as a textbook of Pattern Recognition courses and also for professionals and researchers who need to apply Pattern Recognition techniques These are explained in a unified and innovative way with multiple examples enhancing the clarification of concepts and the application of methods Recent methods and results in Pattern Recognition are also presented in a clear way A CD ROM offered with the book includes datasets and software tools making it easier for the reader to follow the taught matters in a hands on fashion right from the start
