Visions of Artificial Intelligence Stefan Raß, 2021-03-30 Master s Thesis from the year 2019 in the subject Computer Sciences Artificial Intelligence grade 1 University of Vienna language English abstract Artificial Intelligence AI is often considered to be one of the defining technologies which will be important in shaping the prosperity and power dynamics of the twenty first century In the last five years many governments around the world tried to implement policies that are intended to foster AI innovation in order to position themselves as leaders in a space that is thought to be the next global paradigm shift Europe and the United States are thought leaders in this field and have published policy documents aimed at deliberating the future progress of AI and defining national policies or research strategies which should serve as signposts for subsequent decisions Research in Science Technology Society STS studies has shown how sociotechnical imaginaries shape the ways emerging technologies are assessed evaluated and regulated in

differing political cultures They inform the visions that make certain options possible specific outcomes plausible and leave other avenues for policy dormant This thesis explores these imaginaries found in policy documents connected to regulatory attitudes towards AI and the social changes linked to this emerging technology in the United States and Europe along three dimensions First the dominant visions images and ideals associated with the technological innovation in AI Second the expectations of benefits and risks projected onto AI And third the imagined role of governance of AI in the policy documents as well as how society is imagined to be part of the assessment development and regulation The thesis suggests that AI offers a new and rich window into regulatory imaginaries in a specific moment of technological emergence Some of the uncovered attitudes towards AI are reflected in imaginaries connected to previous technologies however AI constitutes a novel moment of emergence that links to unique attitudes to regulating self learning algorithmic intelligence

The Dynamic Structure of Everyday Life Philip Agre, Massachusetts Institute of Technology. Artificial Intelligence Laboratory, 1988 A running argument means continually redeciding what to do Continually redeciding what to do is more flexible than executing a plan because it is more responsive to opportunities and contingencies It is possible to approximate the ideal of continual redecision because life is wholly a routine The routine portion of the reasoning leading to each moment's action can be implemented very efficiently by recording the reasons behind any novel bits of reasoning a method known as dependency maintenance A computer program called the running argument illustrates this point *The Smart Set*, 1929 *Telos*, 1987
