Vishnu D. Rajput,Krishan K. Verma,Neetu Sharma,Tatiana Minkina,2022-06-01 Nanotechnology has shown great potential in all spheres of life With the increasing pressure to meet the food demands of rapidly increasing population thus novel innovation and research are required in agriculture The principles of nanotechnology can be implemented to meet the challenges faced by agricultural demands Major challenges include the loss of nutrients in the soil and nutrient deficient

plants which result in a lower crop yield and quality Subsequently consumption of such crops leads to malnourishment in humans especially in underprivileged and rural populations One convenient approach to tackle nutrient deficiency in plants is via the use of fertilizers however this method suffers from lower uptake efficiency in plants Another approach to combat nutrient deficiency in humans is via the use of supplements and diet modifications however these approaches are less affordably viable in economically challenged communities and in rural areas Therefore the use of nano fertilizers to combat this problem holds the greatest potential Additionally nanotechnology can be used to meet other challenges in agriculture including enhancing crop yield protection from insect pests and animals and by use of nano pesticides and nano biosensors to carry out the remediation of polluted soils The future use of nanomaterials in soil ecosystems will be influenced by their capability to interact with soil constituents and the route of nanoparticles into the environment includes both natural and anthropogenic sources The last decade has provided increasing research on the impact and use of nanoparticles in plants animals microbes and soils and yet these studies often lacked data involving the impact of nanoparticles on biotic and abiotic stress factors This book provides significant recent research on the use of nano fertilizers which can have a major impact on components of an ecosystem This work should provide a basis to further study these potential key areas in order to achieve sustainable and safe application of nanoparticles in agriculture
