FPGA Implementations of Neural Networks Amos R. Omondi,Jagath C. Rajapakse,2006-10-04 During the 1980s and early 1990s there was significant work in the design and implementation of hardware neurocomputers Nevertheless most of these efforts

may be judged to have been unsuccessful at no time have have ha ware neurocomputers been in wide use This lack of success may be largely attributed to the fact that earlier work was almost entirely aimed at developing custom neurocomputers based on ASIC technology but for such niche eas this technology was never suf ciently developed or competitive enough to justify large scale adoption On the other hand gate arrays of the period m tioned were never large enough nor fast enough for serious arti cial neur network ANN applications But technology has now improved the capacity and performance of current FPGAs are such that they present a much more realistic alternative Consequently neurocomputers based on FPGAs are now a much more practical proposition than they have been in the past This book summarizes some work towards this goal and consists of 12 papers that were selected after review from a number of submissions The book is nominally divided into three parts Chapters 1 through 4 deal with foundational issues Chapters 5 through 11 deal with a variety of implementations and Chapter 12 looks at the lessons learned from a large scale project and also reconsiders design issues in light of current and future technology
