Intelligent CAD Systems I Paul J.W. ten Hagen,Tetsuo Tomiyama,2012-12-06 CAD Computer Aided Design technology is now crucial for every division of modern industry from a viewpoint of higher productivity and better products As technologies advance the amount of information and knowledge that engineers have to deal with is constantly increasing This results in seeking more advanced computer technology to achieve higher functionalities flexibility and efficient performance of the CAD systems Knowledge engineering or more broadly artificial intelligence is considered a primary candidate technology to build a new generation of CAD systems Since design is a very intellectual human activity this approach seems to make sense The ideas of intelligent CAD systems ICAD are now increasingly discussed everywhere We can observe many conferences and workshops reporting a number of research efforts on this particular subject Researchers are coming from computer science artificial intelligence mechanical engineering electronic engineering civil engineering architectural science control engineering etc But still we cannot see the direction of this concept or at least there is no widely accepted concept of ICAD What can designers expect from these future generation CAD systems In which direction must developers proceed The situation is somewhat confusing

Calculated Surprises Johannes Lenhard,2019-02-18 If all philosophy starts with wondering then *Calculated Surprises* starts with wondering about how computers are changing the face and inner workings of science In this book Lenhard concentrates on the ways in which computers and simulation are transforming the established conception of mathematical modeling His core thesis is that simulation modeling constitutes a new mode of mathematical modeling that rearranges and inverts key features of the established conception Although most of these new key features such as experimentation exploration or epistemic opacity have their precursors the new ways in which they are being combined is generating a distinctive style of scientific reasoning Lenhard also documents how simulation is affecting fundamental concepts of solution understanding and validation He feeds these transformations back into philosophy of science thereby opening up new perspectives on longstanding oppositions By combining historical investigations with practical aspects *Calculated Surprises* is accessible for a broad audience of readers Numerous case studies covering a wide range of simulation techniques are balanced with broad reflections on science and technology Initially what computers are good at is calculating with a speed and accuracy far beyond human capabilities Lenhard goes further and investigates the emerging characteristics of computer based modeling showing how this simple observation is creating a number of surprising challenges for the methodology and epistemology of science These calculated surprises will attract both philosophers and

scientific practitioners who are interested in reflecting on recent developments in science and technology Bibliography for Verification and Validation in Computational Simulations William L. Science At Century's End Martin Carrier, Laura Ruetsche, Gerald J. Massey, 2014-08-09 To most laypersons and scientists science and progress appear to go hand in hand yet philosophers and historians of science have long questioned the inevitability of this pairing As we take leave of a century acclaimed for scientific advances and progress Science at Century s End the eighth volume of the Pittsburgh Konstanz Series in the Philosophy and History of Science takes the reader to the heart of this important matter Subtitled Philosophical Questions on the Progress and Limits of Science this timely volume contains twenty penetrating essays by prominent philosophers and historians who explore and debate the limits of scientific inquiry and their presumed consequences for science in the 21st century
