

SUPERHEATED STEAM DRYER

- If steam pressure is kept constant and more energy is added, its temperature increases and saturated steam becomes superheated steam (SHSD).
- If extra heat can be transferred to an available heat sink, SHSD returns to saturated conditions.
- Any convection dryer can be made into SHSD e.g. fluidized bed, flash, rotary, conveyor type, spray, impinging jet; opposing jets (impinging streams) etc. Additional heat sources e.g. radiation, conduction, MW etc can also be added.
- Low, near-atmospheric or high pressure operation possible.

Advanced Computational Approaches for Drying in Food Processing Krunal M. Gangawane,Madhuresh Dwivedi,Ram Chandra Pradhan,2024-09-17 Computational methods have become important techniques for drying in food processing There are two principle computational approaches for system analysis continuous and discrete In the continuous approach the governing equations can be obtained by applying the fundamental laws such as conservation of mass momentum and energy over an infinitesimal control volume These equations are further discretized by using a suitable discretization technique The recovered set of algebraic equations are then solved by an applied numerical method The discrete approach concentrates on mimicking the molecular movement within system Recent years have witnessed a rapid development in the field of computational techniques owing to its abundant benefit to the food processing industry The relevance of advanced computational methods has helped in understanding the fundamental physics of thermal and hydrodynamics behavior that can provide benefits to the food processing industry in numerous applications such as drying
