Systems Biology Ravi Salgia, Mohit Kumar Jolly, Prakash Kulkarni, Govindan Rangarajan, 2025-09-04 Over the centuries civilization has seen considerable advances in healthcare. Cancer is among the most challenging healthcare issues that we face today, but a number of discoveries have led to better care. Despite all the progress and the promise regarding early detection and precision medicine, we are still faced with the nettlesome problem: cancer is a moving target. Even within an individual tumour, deep sequencing analyses now indicate multiple phenotypically distinct subpopulations whose representation seems to vary dramatically from one stage to the next as the tumour progresses. *Cancer Systems Biology* provides state-of-the-art reviews and thought-provoking ideas in a concise and succinct manner. This insightful textbook is a cross-pollination of concepts from multiple disciplines and experimental approaches to study cancer. The chapters provide new ideas and thoughts outlining how a quantitative picture of cancer can provide a deeper understanding of the disease and how a systems-level perspective may hold the key to fully comprehend how cancer arises and progresses. Written by experts in multiple disciplines including systems biologists, science researchers, physicists, mathematicians, and clinicians, *Cancer Systems Biology* provides a comprehensive up-to-date treatise devoted to understanding cancer from a systems perspective. Providing new conceptual insights that can aid precision medicine, it will be essential reading for academic researchers in the field, clinicians, graduate students, and scientists with an interest in cancer biology.

Diabetes and Neurodegeneration Debasis Bagchi, Samudra Prosad Banik, Rameshwar Nath Chaurasia, 2025-12-19 Diabetes and Neurodegeneration unlocks the complex interplay between diabetes and Neurodegeneration, reviewing the relationship between these two prevalent health challenges. This book begins with a simple guide to understanding high blood sugar, tracing the historical milestones of hyperglycemia and unveiling the primary factors that contribute to diabetes development, from genetic predisposition to lifestyle hazards. The second section aims to bridge the gap between diabetes and dementia, presenting early clinical evidence, case studies, and susceptibility assessments that underscore the strong link between hyperglycemia and neurodegeneration. Biomarkers and pathways connecting these conditions are explored, including the role of Advanced Glycated End (AGE) products and their implications in protein misfolding and aggregation. The narrative extends to therapeutic strategies, evaluating the efficacy of antidiabetic drugs targeting insulin resistance and introducing novel interventions to arrest amyloid-associated pathogenesis. This comprehensive guide provides both clinicians and researchers with a thorough understanding of the intricate link between diabetes and neurodegeneration. Identifies the cognitive impairment symptoms and the direct impact on the nervous system's structure and electrophysiology. Explores disruptions in insulin signaling as key contributors to neurodegeneration in hyperglycemic individuals. Highlights early diagnostic and prognostic indicators of diabetes and cognitive impairment. Discusses signaling pathways, including the insulin signaling pathway and the AGE/RAGE axis, that connect diabetes and dementia. Evaluates the efficacy of antidiabetic drugs, targets insulin resistance, and critically assesses RAGE-based therapeutic interventions. Presents novel therapeutics to arrest and delink diabetes from the
