Biology, 9th Ed Peter H. Raven, 2008 **The New Eugenics** Conrad B. Quintyn Ph.D., 2020-12-17 The specter of early twentieth century eugenics with its goal of preventing the unfit from reproducing through forced sterilization still haunts us in this era of genetic engineering Conrad B Quintyn an associate professor of biological anthropology at Bloomsburg University Bloomsburg Pennsylvania calls this the new eugenics era because geneticists have begun to explore ways to prevent and repair defective genes in all humans In this book he considers whether genetic engineering will exacerbate social injustices and or lead to a public safety issue For instance in 2012 virologists in the U S and the Netherlands genetically engineered avian bird flu to be more transmissible between mammals These scientists argued that virus transmission between mammals enables us to make vaccines to prevent pandemics They never considered what would happen if the virus accidentally escaped the laboratory Meanwhile some scientists are experimenting with designer babies altering genes to remove diseases and even programming certain traits Join the author as he considers whether scientists are playing God as well as the risks we face by altering genetics in *The New Eugenics* *The Nature of Race* Ann Morning, 2011-06-24 What do Americans think race means What determines one s race appearance ancestry genes or culture How do education government and business influence our views on race To unravel these complex questions Ann Morning takes a close look at how scientists are influencing ideas about race through teaching and textbooks Drawing from in depth interviews with biologists anthropologists and undergraduates Morning explores different conceptions of race finding for example that while many sociologists now assume that race is a social invention or construct anthropologists and biologists are far from such a consensus She discusses powerful new genetic accounts of race and considers how corporations and the government use scientific research for example in designing DNA ancestry tests or census questionnaires in ways that often reinforce the idea that race is biologically determined Widening the debate about race beyond the pages of scholarly journals *The Nature of Race* dissects competing definitions in straightforward language to reveal the logic and assumptions underpinning today s claims about human difference **The American Biology Teacher** ,1992 **Biotechnology: Scientific Advancement Versus Public Safety** Conrad B Quintyn, 2022-10-07 In this book Dr Quintyn considers whether genetic engineering will exacerbate social injustices and or lead to public safety issues As designer babies mature will they feel a sense of superiority or pass on mutations that negatively affect future generations Should we ignore the risk of

zoonotic animal diseases because they offer potential benefits for reducing organ shortages Scientific advancement if not guided responsibly and with public input can be detrimental to public safety This book is unique as it encompasses many biotechnologies within the definition of biotechnology It gives a balanced view of biotechnology its promise as evidenced in repairing mutations i e genetic editing and its dangers evidenced in creating unintentionally dangerous microbes or unregulated germline editing and cloning Additionally this book includes animals in biotechnological research because the success advances techniques and science of genetic engineering could not have occurred without using animals and microorganisms insects plants as model organisms A comprehensive description of the CRISPR system in bacteria and the exploitation of this knowledge in creating the CRISPR Cas9 technology is also incorporated in this read The author s overall goal is to discuss other biotechnology that is being used to improve and put at risk the health environment and safety of humans giving the book a competitive edge Furthermore the book provides a provocative side in challenging scientists to consider the current belief governing research and development which is that scientific advancement and public safety create a false dichotomy
