Bitcoin A Peer To Peer Electronic Cash System:

Bitcoin, a Peer-to-peer Electronic Cash System Satoshi Nakamoto, 2008 A purely peer to peer version of electronic cash would allow online payments to be sent directly from one party to another without going through a financial institution Digital signatures provide part of the solution but the main benefits are lost if a trusted third party is still required to prevent double spending We propose a solution to the double spending problem using a peer to peer network The network timestamps transactions by hashing them into an ongoing chain of hash based proof of work forming a record that cannot be changed without redoing the proof of work The longest chain not only serves as proof of the sequence of events witnessed but proof that it came from the largest pool of CPU power As long as a majority of CPU power is controlled by nodes that are not cooperating to attack the network they will generate the longest chain and outpace attackers The network itself requires minimal structure Messages are broadcast on a best effort basis and nodes can leave and rejoin the network at will accepting the longest proof of work chain as proof of what happened while they were gone

Bitcoin and Cryptographic Finance. Technology, Shortcomings and Alternative Cryptocurrencies Lukas Leys,2017-12-06 Designed by an anonymous creator Bitcoin is an intriguing and revolutionary modern technology and payment transaction infrastructure But as with any new technology there are many obstacles and threats on the path towards mainstream acceptance What are the shortcomings of the Bitcoin protocol and Bitcoin as a currency Moreover which competitors may one day be able to surpass Bitcoin and make it obsolete Could a suitable competitor replace Bitcoin or will the open source virtual currency keep improving itself to make competition obsolete Traditional classifications for currencies do not adequately apply to Bitcoin It is a new type of financial technology that entered the global market in 2008 and has since been able to draw the attention of investors business leaders regulators and politicians Whereas a Dollar Yen Yuan or Euro can be hold like a currency they cannot be secured and transacted simply by itself Individuals have to rely on third party intermediaries in order to transfer funds for them and in order to store them securely Contrary to that one cannot focus on Bitcoin as a currency without acknowledging that it is also a transaction system in itself and would not be able to function is one part of this duality is gone In fact it is even more precise to look at Bitcoin as a decentralized transaction and financial services system with a currency function being only one aspect of the technology In this book Bitcoin Ripple cryptocurrency financial technology financial service virtual currency

Bitcoin Hat Bitcoin die Chance als Zahlungsmittel anerkannt zu werden?, 2024-06-18 Studienarbeit aus dem Jahr 2022 im Fachbereich BWL Sonstiges Note 1,0 Fachhochschule Düsselndorf Sprache Deutsch Abstract Das Ziel dieser Arbeit ist es anhand der Gegenüberstellung von Chancen und Risiken eine Aussage über die Zukunft des Bitcoins als Zahlungsmittel zu treffen. Methodisch wird folgendermaßen vorgegangen: Zuerst werden im zweiten Kapitel der Arbeit im Rahmen der theoretischen Grundlagen die Begriffe Zahlungsmittel und Virtuelle Währung erläutert. Dieses soll dabei helfen die Fragestellung richtig zu verstehen. Darauf aufbauend wird im dritten Kapitel der Bitcoin im Fokus stehen. Hier wird die Historie, die Funktionsweise und die Verbreitung des Bitcoins erklärt. Folglich werden im vierten und fünften Kapitel die Risiken und Chancen besprochen. Schließlich wird im letzten Kapitel das Fazit gezogen. Im Jahr 1909 wurde das Papiergeld in Deutschland als gesetzliches Zahlungsmittel anerkannt. Seitdem ist das Papiergeld ein unverzichtbares Zahlungsmittel für die Menschen. Nun sind wir in einem digitalen Zeitalter angekommen, wo schon seit Jahren über die Abschaffung des Papiergeldes diskutiert wird. Es ist möglich, dass in der fernen Zukunft Münzen und das Papiergeld komplett aus unserem Alltag verschwindet und alles nur digital abläuft. Bereits jetzt werden die 500er Scheine nicht mehr produziert. Zudem schreiten weitere Projekte seitens der Europäischen Zentralbank voran: bereits in der nahen Zukunft soll das Bargeld durch den digitalen Euro ergänzt werden. Auch die Kryptowährungen rücken immer mehr in die Schlagzeilen. Immer mehr Anbieter akzeptieren eine Zahlung mit der bekanntesten Kryptowährung, den Bitcoin. Daraus ergibt sich auch die Fragestellung dieser Arbeit: **Hat der Bitcoin die Chance als offizielles Zahlungsmittel anerkannt zu werden?**

Liutauras Rokas, 2020-04-28 Master's Thesis from the year 2019 in the subject Computer Sciences Cryptocurrency grade 2,7 course INNOVATION AND TECHNOLOGY MANAGEMENT language English abstract Is the consumer willing to adopt the innovative blockchain based cryptocurrency Bitcoin as a payment method? The aim of this work is to assess the European consumer's intention to use Bitcoin for payments. Bitcoin is not yet defined in many ways. The role of the consumer is important as consumers play a significant role in technology adoption. In this work, Bitcoin is investigated from the consumer's perspective as an available innovative payment method. A literature review allowed characterizing Bitcoin and to outline factors that have an effect on the consumer's intention to adopt this innovative technology for payments. These factors, compatibility as in Innovation Diffusion Theory and perceived risk, were integrated with a theoretical research model, Technology Acceptance Model, and its constructs, perceived ease of use, perceived usefulness, and behavioral intention, in order to predict the consumer's intention to use Bitcoin for payments. The proposed model was empirically tested using data collected from a survey of European consumers. The Structural Equation Modeling (SEM) technique was used to evaluate this research model, and a Confirmatory Factor Analysis (CFA) was performed to test the reliability and validity of the proposed measurement model.
