AMDP ABAP Managed Database Procedures our in database processing engine enables us to write complex logic directly in SQLScript harnessing HANA's parallel processing capabilities We focus on crafting efficient AMDP procedures by adopting set based operations and minimizing unnecessary data movement Next we explore Core Data Services CDS Views our go to data modeling tool CDS Views are not just simple database views they act as semantic layers that define how our applications interact with data We learn to create optimized CDS Views by leveraging associations annotations and table functions enabling us to build reusable high performance data models These views simplify complex queries improve data consistency and enhance application flexibility We then turn to Native SQL our direct line to the HANA database While AMDP and CDS Views provide powerful abstractions Native SQL offers ultimate control for specialized tasks We embed Native SQL within AMDP procedures to access database specific features and fine tune performance for critical operations Along the way we apply best practices for writing efficient queries with a strong focus on indexing join strategies

and precise data filtering Throughout this journey we emphasize the importance of rigorous testing and proactive monitoring Just like a race car undergoes extensive testing before hitting the track our ABAP applications require careful validation to ensure accuracy and optimal performance We explore techniques for unit testing AMDP procedures validating CDS Views and monitoring query performance We also look at strategies for detecting and addressing potential bottlenecks before they affect end users SAP ABAP 7 5 Optimization for HANA is not just about writing faster code it s about fundamentally rethinking how we develop applications By embracing code pushdown leveraging AMDP CDS Views and Native SQL and implementing robust testing and monitoring strategies we build ABAP applications that are not only faster but also more scalable maintainable and adaptable to the ever evolving demands of modern business You Will Learn how to implement the code pushdown philosophy moving data intensive operations directly into the HANA database to reduce data transfer and processing overhead Understand to create optimized CDS Views leveraging associations annotations and table functions to build reusable high performance data models that simplify complex queries and improve data consistency Explore how to write complex logic directly in SQLScript using AMDP harnessing HANA s parallel processing capabilities and using Native SQL for specialized tasks accessing database specific features to optimize performance This Book is For ABAP Developers SAP Consultants and Architects and IT Managers and Technical Leads
