Network Automation with

Ansible Jeremy L. Murphy, 2015-12-07 Stop configuring the network. Start engineering it. For decades the life of a network engineer has been defined by the Command Line Interface. It has been a world of manual SSH sessions, copy-pasting config snippets at 3:00 AM, and the constant gnawing fear that a single typo could bring down the entire data center. But the industry has changed. The era of the CLI Jockey is fading, replaced by the era of NetOps. Today's networks are too complex, too critical, and too dynamic to be managed by hand. To survive and thrive in this new landscape, you don't just need to work harder; you need to work differently. You need automation. Network Automation with Ansible is not just another technical manual; it is a comprehensive blueprint for transforming your entire operational model. Written by an expert developer and infrastructure architect, this book bridges the widening gap between traditional networking and modern DevOps practices. It cuts through the hype to provide a practical, production-ready roadmap for mastering Ansible, the industry standard for agentless, multi-vendor automation.

What You Will Learn

- This book takes you from Hello World to building a fully orchestrated, self-healing network platform.
- You will move beyond simple scripts and learn to architect systems that are scalable, auditable, and secure.
- Master the Automation Mindset: Shift from imperative command pushing to declarative state management. Learn why idempotency is the most important word in your vocabulary and how to treat your network as code.
- Conquer the Multi-Vendor Maze: Stop writing separate scripts for Cisco, Juniper, and Arista. Learn to write abstract, vendor-agnostic playbooks that adapt dynamically to your hardware using Ansible's powerful Resource Modules.
- Build a Single Source of Truth: Say goodbye to stale spreadsheets. Discover how to integrate Ansible with dynamic inventories like NetBox and ServiceNow to ensure your automation always acts on live, accurate data.
- Implement GitOps and CI/CD: Move your configurations into version control. Learn to build pipelines with GitLab CI, GitHub Actions, or Jenkins that automatically validate, test, and deploy your network changes without human intervention.
- Enforce Compliance and Security: Sleep better at night by automating the boring stuff. Build playbooks that automatically detect configuration drift, enforce security standards like CIS benchmarks, and generate audit-ready HTML/PDF reports for your compliance team.
- Extend Ansible with Python: When YAML isn't enough, go deeper. Learn to write custom Python modules and plugins to handle complex logic, interact with legacy APIs, and push telemetry to dashboards like Grafana.

Who This Book Is For

- Network Engineers tired of repetitive tasks and looking to future-proof their careers.
- System Administrators who need to manage network gear with the same ease as Linux servers.
- DevOps Professionals tasked with integrating physical infrastructure into their deployment pipelines.

Why This Book

Most tutorials show you how to automate a lab. This book shows you how to automate an enterprise. It addresses the real-world, messy problems: how to handle legacy devices, how to manage secrets securely with Vault, how to perform safe rollbacks during failed deployments, and how to scale execution to thousands of nodes using Ansible Tower/AWX. The network is no longer a bottleneck. It is a platform. Grab your copy today and start building the future of network operations.
