Frontiers in Software Engineering Education Jean-Michel Bruel,Alfredo Capozucca,Manuel Mazzara,Bertrand Meyer,Alexandr Naumchev,Andrey Sadovykh,2020-08-11 This book constitutes invited papers from the First International Workshop on Frontiers in Software Engineering Education FISEE 2019 which took place during November 11-13 2019 at the Chateau de Villebrumier France The 25 papers included in this volume were considerably enhanced after the conference and during two different peer review phases The contributions cover a wide range of problems in teaching software engineering and are organized in the following sections Course experience lessons learnt curriculum and course design competitions and

workshops empirical studies tools and automation globalization of education and learning by doing The final part TOOLS Workshop Artificial and Natural Tools ANT contains submissions presented at a different but related workshop run at Innopolis University Russia in the context of the TOOLS 2019 conference FISEE 2019 is part of a series of scientific events held at the new LASER center in Villebrumier near Montauban and Toulouse France

Euclidean, Non-Euclidean, and Transformational Geometry Shlomo Libeskind, Isa S. Jubran, 2024-10-22 This undergraduate textbook provides a comprehensive treatment of Euclidean and transformational geometries supplemented by substantial discussions of topics from various non Euclidean and less commonly taught geometries making it ideal for both mathematics majors and pre service teachers Emphasis is placed on developing students deductive reasoning skills as they are guided through proofs constructions and solutions to problems The text frequently emphasizes strategies and heuristics of problem solving including constructing proofs Where to begin How to proceed Which approach is more promising Are there multiple solutions proofs etc This approach aims not only to enable students to successfully solve unfamiliar problems on their own but also to impart a lasting appreciation for mathematics The text first explores at a higher level and in much greater depth topics that are normally taught in high school geometry courses definitions and axioms congruence circles and related concepts area and the Pythagorean theorem similarity isometries and size transformations and composition of transformations Constructions and the use of transformations to carry out constructions are emphasized The text then introduces more advanced topics dealing with non Euclidean and less commonly taught topics such as inversive hyperbolic elliptic taxicab fractal and solid geometries By examining what happens when one or more of the building blocks of Euclidean geometry are altered students will gain a deeper understanding of and appreciation for Euclidean concepts To accommodate students with different levels of experience in the subject the basic definitions and axioms that form the foundation of Euclidean geometry are covered in Chapter 1 Problem sets are provided after every section in each chapter and include nonroutine problems that students will enjoy exploring While not necessarily required the appropriate use of freely available dynamic geometry software and other specialized software referenced in the text is strongly encouraged this is especially important for visual learners and for forming conjectures and testing hypotheses

The Hard Mathematical Olympiad Problems and Their Solutions Steve Dinh, 2011 This book shows the approaches to solving many difficult Mathematical Olympiad and other international problems posted at

the www.mathlinks.ro the largest mathematical webpage that has most of the problems used to select the talented students of the world At the time of this book's publication the solutions to many of these problems are not yet available This book is not only as much about methods of solving mathematical problems as it is about various approaches to solving the difficult problems in general It is a first step in examining the creativity that goes into problem solving The real points of the book are the enumeration of problem solving strategies and the tricks applied to solve the problems The approaches in the book build understanding and not just methods in solving problems This book is a must read for many math students and is useful for many teachers around the world *ARNOLD: Swimming Against the Tide* Boris A. Khesin, Serge L. Tabachnikov, 2014-09-10 Vladimir Arnold an eminent mathematician of our time is known both for his mathematical results which are many and prominent and for his strong opinions often expressed in an uncompromising and provoking manner His dictum that Mathematics is a part of physics where experiments are cheap is well known This book consists of two parts selected articles by and an interview with Vladimir Arnold and a collection of articles about him written by his friends colleagues and students The book is generously illustrated by a large collection of photographs some never before published The book presents many a facet of this extraordinary mathematician and man from his mathematical discoveries to his daredevil outdoor adventures

Number Theory Titu Andreescu, Dorin Andrica, 2009-06-12 This introductory textbook takes a problem solving approach to number theory situating each concept within the framework of an example or a problem for solving Starting with the essentials the text covers divisibility unique factorization modular arithmetic and the Chinese Remainder Theorem Diophantine equations binomial coefficients Fermat and Mersenne primes and other special numbers and special sequences Included are sections on mathematical induction and the pigeonhole principle as well as a discussion of other number systems By emphasizing examples and applications the authors motivate and engage readers [Functional Equations and How to Solve Them](#) Christopher G. Small, 2006-11-14 Many books have been written on the theory of functional equations but very few help readers solve functional equations in mathematics competitions and mathematical problem solving This book fills that gap Each chapter includes a list of problems associated with the covered material These vary in difficulty with the easiest being accessible to any high school student who has read the chapter carefully The most difficult will challenge students studying for the International Mathematical Olympiad or the Putnam Competition An appendix provides a springboard for further investigation of the concepts of limits infinite series and continuity [Mathematical Olympiads 2000-2001](#) Titu Andreescu, Zuming Feng, George Lee, 2003-10-16 Problems and solutions from Mathematical Olympiad Ideal for anyone interested in mathematical problem solving [Problems And Solutions In Mathematical Olympiad \(High School 1\)](#) Bin Xiong, Zhi-gang Feng, 2022-04-07 The series is edited by the head coaches of China's IMO National Team Each volume catering to different grades is contributed by the senior coaches of the IMO National Team The Chinese edition has won the award of Top 50 Most Influential Educational Brands in China The series is created in line with the mathematics cognition
