This article reviews the development of some novel low-profile antennas for CubeSats. The integrated antennas were developed using microstrip-antenna technology, and the antennas were designed to be low profile while having minimal or zero blockage of the solar panels on the CubeSat. Two types of designs were investigated: 1) transparent antennas, which are placed above the solar panels (supersolar) and 2) nontransparent antennas, which are placed below the solar panels (subsolar). Frequency Selective Surfaces based High Performance Microstrip Antenna Shiv Narayan, B. Sangeetha, Rakesh Mohan Jha, 2015-09-24 This book focuses on performance enhancement of printed antennas using frequency selective surfaces FSS technology The growing demand of stealth technology in strategic areas requires high performance low RCS radar cross section antennas Such requirements may be accomplished by incorporating FSS into the antenna structure either in its ground plane or as the superstrate due to the filter characteristics of FSS structure In view of this a novel approach based on FSS technology is presented in this book to enhance the performance of printed antennas including out of band structural RCS reduction In this endeavor the EM design of microstrip patch antennas MPA loaded with FSS based i high impedance surface HIS ground plane and ii the superstrates are discussed in detail The EM analysis of proposed FSS based antenna structures have been carried out using transmission line analogy in combination with the reciprocity theorem Further various types of novel FSS structures are considered in

designing the HIS ground plane and superstrate for enhancing the MPA bandwidth and directivity The EM design and performance analyses of FSS based antennas are explained here with the appropriate expressions and illustrations
