Reinforced Concrete Structures - Innovations in Materials, Design and Analysis Amal I. Hassan, Mohsen Mhadhbi, Hosam Saleh, 2023-07-26 Reinforced concrete has long been a cornerstone of modern construction offering strength durability and versatility in building structures of all types As the demand for sustainable high performance materials grows so does the need for continued innovation and advancement in this field This comprehensive collection of articles brings together the latest research and insights into the many aspects of reinforced concrete From materials and properties to design and optimization and even the identification of pathologies and the effects of corrosion each section offers valuable knowledge and expertise With contributions from leading experts in the field this collection provides a comprehensive overview of the latest innovations and research in reinforced concrete It is an essential resource for researchers engineers and practitioners seeking to stay up to date with the latest advancements in this important field

Bond and anchorage of embedded reinforcement: Background to the fib Model Code for Concrete Structures 2010 fib - Fédération internationale du béton, 2014-05-01 As part of the preparation for the fib Model Code for Concrete Structures 2010 task group 4 5 Bond Models undertook a major review of rules for bond and anchorage of reinforcement in the CEB FIP Model Code 1990 This bulletin presents the outcome of that review describes the rationale for the revisions and presents the evidence on which the revisions are based The principle changes in MC2010 include raising the limit on concrete strength that may be used when determining bond resistance to 110MPa introduction of a coefficient 4 to cater for different reinforcement Classes and coverage of new construction materials including epoxy coated and headed bars The format of design rules has been changed to permit more rational treatment of confinement from concrete cover and transverse reinforcement the contribution of end hooks and bends for tension bars and end bearing to compression laps New guidance is provided covering a range of construction techniques and service environments and the influence of long term degradation Analyses of various aspects of detailing on performance of laps and anchorages have resulted in discontinuation of the proportion lapped factor 6 alterations to requirements of transverse reinforcement at laps and have resolved inconsistencies in provisions for bundled bars between major national codes Apparent inconsistencies in existing rules for lapped joints and anchorages and between the local bond slip model and design rules are also resolved thus allowing integration of application rules and modelling Finally the basis for an attempt to introduce simple detailing rules for laps and anchorages is described

Decision Based Design Vjitashwa Pandey, 2013-08-26 In a presentation that formalizes what makes up decision based design Decision Based Design defines the major concepts that go into product realization It presents all major concepts in design decision making in an integrated way and covers the fundamentals of decision analysis in engineering design It also trains engineers to understand the impacts of design decision The author teaches concepts in

demand modeling and customer preference modeling and provides examples This book teaches most fundamental concepts encountered in engineering design like concept generation multiattribute decision analysis reliability engineering design optimization simulation and demand modeling The book provides the tools engineering practitioners and researchers need to first understand that engineering design is best viewed as a sequence of decisions made by the stakeholders involved and then apply the decision based design concepts in practice It teaches fundamental concepts encountered in engineering design such as concept generation multiattribute decision analysis reliability engineering design optimization simulation and demand modeling This book helps students and practitioners understand that there is a rigorous way to analyze engineering decisions taking into consideration all the potential technical and business impacts of their decisions It can be used in its entirety to teach a course in decision based design while selected chapters can also be used to cover courses in subdisciplines that make up decision based design

Code-type models for concrete behaviour fib Fédération internationale du béton,2013-11-01 fib Model Code 2010 represents the state of the art of code type models for structural behaviour of concrete It comprises constitutive relations and material models together with the most important explanatory notes However the underlying normative work i e the fundamental data as well as the considerations and discussions behind the formulas could not be given within the Model Code text Based on various experiences gained after the publication of Model Code 1990 this lacking background information will lead in the following to numerous questions arising from Model Code users Consequently the present bulletin claims to conquer this general weakness of codes in a way to guard against any future misunderstandings of the Model Code 2010 related to its chapter 5 1 Concrete It discusses the given formulas in connection with experimental data and the most important international literature The constitutive relations or material models being included in MC1990 and forming the basis and point of origin of the Task Group s work were critically evaluated if necessary and possible adjusted or replaced by completely new approaches Major criteria have been the physical and thermodynamical soundness as well as practical considerations like simplicity and operationality This state of the art report is intended for practicing engineers as well as for researchers and represents a comprehensible summary of the relevant knowledge available to the members of the fib Task Group 8 7 at the time of its drafting Besides the fact that the bulletin is a background document for Chapter 5 1 of MC2010 it will provide an important foundation for the development of future generations of code type models related to the characteristics and the behaviour of structural concrete Further it will offer insights into the complexity of the normative work related to concrete modelling leading to a better understanding and adequate appreciation of MC2010
