Biofuels from Algae Pierre Collet, Daniele Spinelli, Laurent Lardon, Arnaud Hélias, Jean-Philippe Steyer, Olivier

Bernard, 2013-08-08 Fossil fuel depletion and attempts at global warming mitigation have motivated the development of biofuels Several feedstock and transformation pathways into biofuel have been proposed as an alternative to the usual fuels Recently microalgae have attracted a good deal of attention because of the promise of reduced competition with food crops and lowered environmental impacts Over the last years several life cycle assessments LCAs have been realized to evaluate the energy benefit and potential global warming reduction of biofuel and bioenergy produced from microalgae This chapter presents a bibliographic review of 15 LCAs of microalgae production and or transformation into biofuel These studies often differ by the perimeter of the study the functional unit and the production technologies or characteristics Methods for environmental impact assessment and the energy balance computation also diverge This review aims to identify the main

options and variations among LCAs and concludes with some recommendations and guidelines to improve the contribution of an LCA and to facilitate comparisons among studies

**Microalgae and Its Potential for Biodiesel Production** Kisan Koirala, 2013 Fossil fuel accounts the highest percent of primary energy consumption and used extensively for transport and other purposes since 1859. Continued use of fossil fuel are recognized as unsustainable because of depleting world reserves and the green house gas emissions associated with their use. Therefore study on microalgal biofuel was performed to evaluate the potential of algal biomass as biofuel resources. Also it is focused on current methods for culturing harvesting and extracting technology of microalgal biomass and economic energetic and environmental impact of biodiesel production. Calculation of total energy yield per hectare per year with oil content of 30% dry weight microalgae was calculated with the values obtained from literature. Also production of biodiesel per hectare per year was calculated and compared with other studies. Results obtained in our study showed similar pattern with other study. From our study we found that total oil yield from algal biomass is much higher than terrestrial plants and therefore microalgae have the potential to completely replace transportation petrol fuel.
