Programming has come a long way

The world of programming may have started quite some time ago it was only a couple of decades ago that it gained attention from computer experts from across the globe

This sudden shift saw some great minds who contributed to the entire age of programming far greater than most

We saw the great GNU project take shape during this era

We came across the rather brilliant Linux

New programming languages were born as well and people certainly enjoyed these to the utmost

While most of these programming languages worked there was something that was missing

Surely something could be done to make coding a less tedious task to do and carry out

That is exactly what a revolutionary new language named after Monty Python s Flying Circus did for the world

Immediately coding became so much easier for programmers

The use of this language started gaining momentum and today it is set to overtake the only language that stands before it to claim the prestigious spot of being the world s most favored language

This language was the brainchild of Guido Van Rossum

Created in the year 1991 Python has become a byword for efficient and user friendly programming

This language is what connected the dots and gave programmers the much needed ease of coding that they have since been yearning for

Naturally the language was received well by the programming community

Today it is one of the most important languages for both professionals and students who aim to excel in fields like Machine Learning automation artificial intelligence and so much more

With real life examples showing a wide variety of use Python is now living and breathing in almost every major social platform web application and website

All of this sounds interesting and exciting at the same time but what if you have no prior knowledge about programming

What if you have no understanding of basic concepts and you
