Gauss Bonnet theorem providing a stunning link between local geometry and global topology a simple geometrical proof of Gauss's famous Theorema Egregium a complete geometrical treatment of the Riemann curvature tensor of an n manifold and a detailed geometrical treatment of Einstein's field equation describing gravity as curved spacetime General Relativity together with its implications for gravitational waves black holes and cosmology The final act elucidates such topics as the unification of all the integral theorems of vector calculus the elegant reformulation of Maxwell's equations of electromagnetism in terms of 2 forms de Rham cohomology differential geometry via Cartan's method of moving frames and the calculation of the Riemann tensor using curvature 2 forms Six of the seven chapters of Act V can be read completely independently from the rest of the book Requiring only basic calculus and geometry Visual Differential Geometry and Forms provocatively rethinks the way this important area of mathematics should be considered and taught

Modern Algebra
John R. Durbin, 1992 Written to help students learn the basic concepts of modern algebra and how to handle abstract ideas and proofs Begins by introducing readers to the mechanics of proofs such as implications contrapositives converses quantifiers and more The fundamental concepts of groups rings and fields are presented along with the use of these concepts through other math courses by characterizing each of the basic number systems integers rational real and complex numbers Packed with examples and problems it includes a variety of applications to both motivate and show the usefulness of modern algebra
